Are Gymnastics and Athletics Unhealthful,
(William James Crume, Phys. Dir.)

When one observes well-developed athletes, he can make up his mind to one thing and that is, that it required long, persistent labor to get the body in that condition and that it means hard work to keep it so.
There is a story in pictures that can never be told in rose or verse. The literature of the Greek and Roman races was most scented with the power and beauty of their gods. Gaze on the statue of a Hercules or an Apollo, and are we not filled with admiration and awe? Even in our modern literature, do we not describe the athlete as one whose strength is Herculean. In whom

There always have been and likely always will be some well-meaning people who argue against gymnastics and athletics. They say that the athlete exercises his muscles at the expense of the mind. Again that athletes contract disease and die young.

The first of these objections is as old as Plato, who
described some of the athletes of his time as "sleeping away their lives." Galen, in speaking of the Greek and Roman athletes, describes them as "heavy and stupid!" Might not the Latin proverb, *Mens Sana in Corpore Sano*, have come to the mind of the writer by seeing athletes in whom the physical and mental were both well developed. Plato and Galen likely meant that the man who gave all his time to developing a massive physique at the expense of his mind, was little better than the beast of the field, and that the time spent was worse than wasted.

Viewed in that sense, athletics and gymnastics would do more harm than good, for mental culture is better than physical, as is Spiritual better than either or both mental and physical. There is more danger of the "book worm" neglecting to take necessary exercise, than there is of the physical culturist not taking enough mental culture.

Caesar, Cicero, Lycurgus and Coriolanus were devotees of manly sports. Alcibiades became master of the Athenians, by reason of eloquence, grace of person and strength of body. Socrates, Themistocles and Plato excelled in gymnastics. Alexander is said to have had great endurance. Sertorius swam the Rhone in full armor. Marius, Pelopidas, Marcellus and Cato delighted in exercise and strength of the body, in fact, ancient and medieval history shows that brain and brawn were two characteristics of men whom the world recognized as leaders.

Modern history shows that our successful men had a good physical education. It reveals the fact that longevity is found in men who follow Nature's laws, whose bodies are strong and powerful. It is said that Washington, after working all day in the forests of Virginia, would wrestle any one who presented himself, and that he at one time wrestled seven men, one after the other and obtained a fall from each. Lincoln, Jefferson, Adams, Franklin, Jackson and Webster were men of strong physiques. Shakespeare, Byron, Goethe, Gladstone and Bismarck were ardent practisers of regular gymnastics of physical culture and have won the admiration of the world by the physical bodies and master minds which they possessed.

Costa seem to think that one exercises for the sole purpose of obtaining big muscles. This is one of the least reasons for exercise. By exercising the voluntary muscles (those over which we have control), we thereby strengthen the involuntary muscles, such as the heart, etc., by increasing the circulation of the blood and the respiratory organs. By our every movement such as breathing, winking, or even thinking, certain cells are killed and must be replaced by others. This work is performed by the blood, which carries the old worn-out cells to the lungs, skin and kidneys, and these organs dispel them from the system, while the blood, ever busy, lays down new material. Vigorous exercise tears down weak cells, and the blood, quickened by the exercise, quickly replaces the dead cells by stronger living ones.

Thus we see how one who exercises daily will soon become possessed with a strong body, not only in having the voluntary muscles large and strong but in whom all the vital organs are strong and vigorous. Exercise alone will not give one perfect health.
THE KNEIPP WATER CURE MONTHLY

Sunshine, pure air, proper food and clothing and sufficient rest and sleep are required. Condiments, drugs, liquors and tobacco should be avoided. We should cultivate cheerfulness and not think about disease and imperfection, but about things pure and health giving.

The writer need not refer to the poses of himself Suffice to say that at one time he was weak and sickly, and regained health and strength by exercise and following the laws of Nature. If one can live when the germs of disease are in the food he eats; in the water he drinks, even in the air he breathes, he can become strong and robust if he uses the powers which God has given him.

One can have no more reason for being weak than he can for being hungry when food is at hand. He who realizes the need of exercising his body, but is too lazy, or deems it inconvenient on account of time or location, must not be surprised if he deteriorates in bodily strength and vigor.

Medical Freedom.

A man ought to be as free to select his physician as his blacksmith, for he alone is to profit or suffer by his choice. The responsibility is his.—Wm. E. Gladstone.

How is it that there are a thousand ways in which I may be permitted to damn my soul, but when it comes to a trivial matter like temporary ill health, the Legislature must prescribe how I shall do it. It is absurd and ridiculous.—Mark Twain.

Medical Monopoly.

I think it would be better for the profession if we all would recognize the fact, that it is better to have patients to die under scientific treatment, than to recover under empirical treatment, therefore ast flutters If needed for your dignity and thereby accept no dictating by the laity. B. F. Posy, M. D., in the Medical Times, Philadelphia, Pa., and Boston, Mass., Oct., 1900.

Mummy.

"A dead body simply dried, or dried after having been embalmed. In the latter acceptance, mummy was extolled as useful in contusions. It was presumed, also to have healing tonic, and resolvent properties. It is now only regarded as an archaical curiosity."—Dunglison's Med. Lexicon, 1874.

When the people became too intelligent to allow the doctors to dose them with mummies, the mummy had to leave the drug store for the museum. When the people become as intelligent in regard to vaccination, it, then, will leave the drug store for the museum, but not sooner.

Doctors have the mummy still; and as the dead cadaver matter, called vaccine, is as close as they can come to using the old and loved mummy remedy; they will fight to the bitter end for the privileges of using their sweet old prescription.

A. J. Claussen, M. D.

Self-reverence, self-knowledge, self-control. These three alone lead life to sovereign power.—Tennyson.

We receive no publication that has so much information that the busy physician will use every day as Kneipp Water Cure Monthly. It is full of the "Sixth sense" (common sense) and not only useful to the physician but invaluable to every household. Sample copies, 10 cents.—Medical Iconoclast.
SECOND EXERCISE.

Stand erect with the weight of the body balanced on the ball of the feet. Look at some dark object intently. As you raise the body, clench the hands, allowing the fingers to touch the life line (thumbs out) and inhale. As you lower the body, open the hands and exhale. Count seven on both the inhalation and exhalation. This also may be done three times a day.

This exercise improves the sense of hearing. The nerves of the ears connect with the nerves of the feet. Concentration, polarization or self-centering is one of the most desirable attainments to possess, since we are all more or less liable to drift from one thing to another, and scattering our forces.

When taking the Breathing Exercises, you should sit or stand erect, with weight thrown upon the balls of the feet, the abdomen drawn in, and the chest thrown out, and spinal column always perfectly straight.

THIRD EXERCISE.

Sit in a chair with the feet comfortably resting on the floor, position same as in the first exercise.

Here we are taught the "power of thought" in holding "The Word," while the gaze is fixed.

Place a penny or some small dark object to concentrate upon, on the floor two feet from your toes. First, expel all the breath in the lungs. As you bend forward, bending only at hips, look intently at the penny or object, inhale slowly, holding the thought: "Breath is life." Emphasize the word "Breath." The time occupied in repeating this thought mentally should equal the same space of time that it took in the previous exercises to count seven.

Retaining the breath, count three (or repeating more quickly), "Life is Breath." As you raise up slowly, preserve the same rhythmic movement, holding the thought, "Breath IS Life!" Repeat the same process for three minutes; the exercise to be taken three times a day.

Hold the head and neck straight. Neither bend nor raise with a jerky movement and keep the gaze steadily fixed.

FOURTH EXERCISE.

Take position as given in Second Exercise. Throw the arms straight out from the body, directly in front of you—with hands from wrist limp and relaxed as if lifeless. Then breathe (all breathing is to be done with closed lips, teeth separated, and through the nostrils). As you breathe, tense the muscles of the arm from the wrist to the shoulder. As you exhale, relax the muscles from shoulders to the wrist, with hand and fingers limp.

At the fourth inhalation you bring the hands diagonally around to the sides and inhale three times, tensing and relaxing the muscles as you inhale and exhale. At the seventh breath you bring the hands around in front of the body, and turn the hands up (but be careful that the fingers do not lock together, since the electricity generated in the body by this exercise has a tendency to draw things to it). You should never shake hands or touch any object within three minutes after this exercise, and if done in the dark, you should be particular that no one sees you fingers for three minutes)—after which drop them.
THE KNEIPP WATER CURE MONTHLY

This likewise is to be performed three times a day. This exercise develops the sense of Taste.

A perverted appetite, caused by the eating of highly seasoned food, the drinking of fermented liquors, and smoking, till the system was full of nicotine and the sense of taste was quite lost—for many years my stomach was my God)—to be able to return to a natural and normal condition, by the simple following of the instructions given in this fourth exercise speaks louder than words, of the great good that may come to us if we will only let it.

This Fourth Exercise generates electricity and causes the phosphorous to appear on the tips of the fingers as of a bluish yellow light.

FIFTH EXERCISE.

Take correct position, as in Second Exercise, and by the power of will, swing the hands in a circular direction, from right to left, in front of your body, the right first, then the left arm twelve times. On the thirteenth swing bend down (bending at the hip only), clench the hand, with the thumb touching the second finger, and touch the floor. Hold the knees stiff and do not allow them to bend.

This exercise is to be taken after each meal. After breakfast, face the East.

At noon, face the South.

At 6 p. m., face the West.

And upon retiring, face the North.

We cultivate the sense of touch as we practice the exercises and follow the instructions.

HEAL YOURSELF AND BECOME CURED.

This is the birthright of all. Another may heal us, but we must cure ourselves. As long as we lean on any person or thing it is liable to be removed and when the support, is taken away, down we go.

In the Fourth Exercise we are taught how to generate within ourselves the electric energies so we can apply them to any part of the body. I have demonstrated the fact satisfactorily to myself.

SIXTH EXERCISE.

Take a chair and kneel down at its back, with the spinal column erect. Place it at arm's length from you. (The rounds of the chair must be round.) Look at some dark object in direct line with the eye. As you take hold of the rounds you inhale, and tighten the grip on the chair rounds, still holding as you retain the breath; as you exhale, relax the hold.

Do this seven counts, in and out, three minutes at a time, but three times a day. But under no circumstances can you overdo it without disaster as the result.

All breathing exercises should be taken between sunrise and sunset.

The Sixth Exercise develops the sense of feeling, which is a finer or higher rate of vibration than touch and is an inferior sense. All senses merge into memory.

SEVENTH EXERCISE—INTUITION.

This exercise develops the intuition. As the brain functions are unfolded they bring into activity the seventy-two thousand nerve centers, opening up the Pineal Gland, and at the same time heightening the vibrations of sound, so that one naturally becomes not only more harmonious within themselves but with all Nature and the Universe.

Take this exercise as part of your ablution. Use a flat pan or bowl deep enough to permit the hands being immersed so that the water covers the wrist, bone. Fist remove all rings from the fingers. Place a copper penny in the pan to generate electricity. Fill the pan with cold water from faucet, well or spring and place on table. Take correct standing position. Put both hands in the pan—thumbs not to touch. Take a deep rhythmic breath, counting seven, then exhale very slowly through the mouth as if you were going to blow out a candle, pucker the mouth the same as in whistling. Repeat this three times—once a day only.

Dry the hands by mopping them with a towel and then thoroughly drying them by rubbing one hand with the palm of the other, the left hand up, right hand palm down, rubbing in a circular direction, from East to West, or toward yourself; then rub outside or right hand, turned down, with left hand palm up, always rubbing in a circular direction or towards yourself.

This exercise unfolds and opens up the brain cells and faculties, and tunes up the senses to a higher rate of vibration.

In the winter, when you want to get warm, inhale deeply and retain the breath, then exhale, taking care to inhale longer than you exhale.

In summer, when you desire to cool off, exhale longer than you inhale.

Never inhale while raising the arms, as it injures the tissues. Breathe, retain the breath, raise the arms, exhale as the arms are lowered.

Breathe in the different attitudes of standing, sitting, or lying down, affect different parts of the body and in different ways.

"Perfect Being" consists in right breathing. We must first study and understand ourselves and then we can understand our neighbors. We must first desire to think and then Will to do right.

EIGHTH LESSON.

is devoted to the diet question, in which Dr. Hanish explains the great advantage of a cereal, nut, fruit and vegetable bill of fare.

Particulars can be obtained from Rev. Dr. Hanish, 163 Prairie Avenue, Chicago.

To CURE SLEEPLESSNESS.—Take a linen handkerchief or bandage, wet and tie same on the left ankle and again on the left side, and concentrating your thought upon the breath, watching its inflow and outflow. If you awaken during the night and find you cannot sleep, breathe through the left nostril, closing the right, and lying on the left side.

THE TORMENTIL-SOAP of Woerishofen is according to the assertion of physicians, chemists and laymen the best soap of the day. It does not only purify the skin but has also medicinal virtues and is most effective for any kind of rashes, chapped skin, freckles, scale and dandruff used with cold or tepid water. It makes the skin, soft and tender and is very economical. Each cake bears the Trade-Mark "Okie". Beware of imitations. For sale at all first-class Kneipp-Stores. Price 20c. a cake, post-paid, direct from Depot: KNEIPP-STGBE, 111 East 59th Str., New York.
Further, one may drink milk, unadulterated chocolate, malt beer (Malheur), and light natural wines. It may be here observed that nourishment should be supplied to the body in the form of solids, not of fluids. The first is supplied exclusively on milk and other fluid nourishment. In riper years, one should drink only, in order to supply the waste of fluid in the body through the blood, perspiration, etc., and in order to stimulate digestion. Unnatural and immediate drinking in public houses is, therefore, in the highest degree objectionable and unhealthy.

Having thus answered the question, what foods and drinks nature has designed for mankind, I will now endeavor to demonstrate the soundness of my theory from the point of view of science. Nature shows us at first, that for every creature which she brings forth, she provides special nourishment at the time, if nourishment is not already within reach. For example, the newly born infant can at once draw nourishment from the mother’s breast, and in the same way, the young of wild animals of the mammal order derive their sustenance from the milk-dispensing udder or teats of the mother.

Furthermore, nature shows us that every creature is nurtured by the parents until it can seek its own food. Not only birds, insects, etc.—which, as we know, leave their birthplace, or fly from their nest, within a short time of their coming into being—are here referred to, but all mammals, including mankind. Every mammal, born and living in a state of nature on God’s earth, is suckled until it can seek its own living. Nature intended that it should be so with mankind also. Our civilization of cultured condition does not admit the fulfillment of that intention; but was it not fulfilled by the earlier races of mankind? It may, at least, be said that the uncultured races, such as the wild Indian tribes, were much nearer to nature than we are.

I do not mean to imply that we ought to become nude ancestors. Nature seems to indicate that mankind was intended to subsist on vegetables. If we glance at the anatomy of the human body, we see that the parts are wanting with which wild, flesh-consuming animals are provided, such as claws and fangs. Creation has ordered and arranged everything so wisely, that we could never suppose there was any omission here. I must, at this point, repeat that the law of nature is the surest of all indicators and the best of all supports. In every sphere and field it will show us, what is right. If we deviate from the path it points out to us, or if we fail to perceive its indications, we are ourselves to blame for the sharpest ills which may happen to us.

We may conclude, therefore, that mankind was not intended to become flesh-eaters, since God and nature have equipped all creatures with the means of procuring food ready for their mouths. If it was ordained that mankind should subsist on vegetable food, it will find its highest happiness only when it has accustomed itself to that form of nourishment. To mankind, as the noblest and most perfect work of creation, is assigned the noblest fruit—ripe fruit.

Nature further shows us plainly, that the man who takes only the food which she has appointed for him, will enjoy a much more healthy, happy and prolonged life than if he turns to unnatural means of sustenance, such as spirits, beer, coffee, tobacco, etc. It is a sad fact that to-day more than ninety in a hundred of all mankind are living in a manner which is more or less contrary to nature. The serious evils which are and must be connected with the use of the above-mentioned stimulants, cannot be put plainly enough before that large majority of the human race.

Each individual follows the example of the overwhelming majority, and endures, without a murmur, disease and sickness which would never occur if the textbooks of the Natural Method of Healing were read and their teachings laid to heart. It is true that to follow my advice, requires an iron energy of will—a virtue which is to-day more rare than the costliest diamond.

Nature also shows us—we refer here to the time of Paradise—that not only the animals, but mankind also, may find food ready to their mouths without great labor and trouble, that indeed it was so found at one time, and we may, therefore, regard all forms of nourishment which require much trouble and elaborate preparation, as more or less unnatural. Besides such unnatural foods, there are a number of artificially-created needs and contrivances which cost mankind a great deal of unnecessary trouble.

What should we Wear?

I will only allude here to the great need of help which the present generation manifest with regard to their clothing. Not only is the clothing of to-day extraordinarily costly—in money, time, and labor—but it is quite out of its own object. It suppresses evaporation, confines the limbs, and makes the wearer more and more a stranger to fresh air. There are still at the present, day so-called “respirator caps” which cover the head, neck and almost the whole of the face. Such productions can only be characterized as absurd and unnatural. In this respect, the conditions under which we live, are in complete contrast with those of our ancestors.

The ancients wore very little clothing of any kind: consequently, their bodies were hardened and they were never cold, because the air inhaling skin generated and gave off warmth enough of its own. Truly, the present generation—which may be compared to a live clotheshorse, packed in, as it is, up to the very nose-tips—may shudder at the thought of their half-nude ancestors.

Coming back to the question of food, we find that God not only provides food ready for the mouth of mankind as well as animals, but also for shrubs and plants, for the root is the mouth of the plant, through which the latter draws its nourishment from the earth; in addition to food, God provides us with drinks ready for the mouth. Everywhere we find springs
THE KNEIPP WATER

which invite us to refreshing draughts. We find also air, ready for our nostrils to inhale. It is to us the life-nervous, and, therefore, we ought to make the most liberal use of so cheap an element of vitality! Mankind as well as animals inhale oxygen. All goes hand in hand, and nature takes care that there shall be no difficulties in the way of our satisfying our vital needs.

With respect to a natural mode of life, my task was made easier by the presence of a picture, by seeing which they should be able to judge for themselves, how each individual, strictly speaking, might live, in order to be vigorous and sound to the core, and to remain so. I know well, however, that a great change in the mode of living cannot be brought about all at once. The first thing which must be done is to convince people of its necessity; when that is brought home, the individual judgment and common sense of everyone, then, and then only, will a gradual revolution take place from our extremely imperfect, health-destroying mode of life to a natural one. My object is to give an impulse to that movement. In order to eradicate an evil, it is necessary to know it in its fullest dimensions, and to see clearly the way in which it may be remedied. It is in that sense that I hope the foregoing propositions will be received.

With regard to the question, how the habit and arrangements of one's life should be moulded, the following hints may be of use: To not remain longer than you can help breathing the vitiated air of places of business, workshops, etc. The air in places of public resort also—in public houses, dancing halls, etc.—is frequently very unhealthy. You should work or take exercise daily, for several hours at least, in the open air; you should avoid cramped sitting positions, and, like children, “go in for lots of fun” in a gay and glad spirit. Schiller concretizes gladness as a heavenly flame, in the song, “Joy, Spark from the Gods.” Oh! that we understood how to use and enjoy that heavenly boons! The whole nature has bestowed it on us; to none other of her creatures has she dispensed it in such full measure. Mankind, and not nature, is to blame that joy, this “spark from the gods,” is not turned to sufficiently good account. I doubt if there are many, even among the richest and most highly placed, who realize fully the enjoyments which nature has marked out for every individual.

I promise a great deal, do I not? But whoever takes nature, so lavish in her gifts, so rich in her resources, as his guarantor, may well promise more happiness and joy than can to-day be imagined. Only to perfect his enjoyment, this “spark from the gods,” is not turned to sufficiently good account. I doubt if there are many, even among the richest and most highly placed, who realize fully the enjoyments which nature has marked out for every individual.

There is one more important rule of health to be noticed. Although I fully recognize that in certain circles the person would be considered mad who advised people to go barefoot at suitable seasons of the year, and to keep the head and body less covered up, I cannot refrain from declaring that this practice is extraordinarily beneficial to the health. There is, moreover, nothing in it that one need be ashamed of, as dwellers in palaces perhaps think there is. Observe the country people, particularly their farm servants, or poorer working classes and their children. These are all accustomed from childhood to go barefooted and bareheaded, and they carry on the habit in adult life, without feeling shy about it.

Ask people who from their early youth have been accustomed to go barefoot and to pay attention to the skin, whether they suffer from headache, or toothache, or sore throat, or whether they are troubled with rheumatic pains in the limbs; they will laugh at you. They are hardened to all weather and defy its influence, whereas the city man, softened through continually covering in a warm room and wearing inordinately warm clothing, is afraid of every breath of air. Whoever will put himself on a friendly footing with the fresh air—that is to say, who will allow it to ventilate freely round his body—will take no harm for once from a somewhat rougher breeze.

As under present conditions going barefoot is out of the question for most people, the next best thing for them would be to leave off wearing socks in summer. This will materially assist evaporation from the feet, and the uncomfortable sensation, which will, perhaps, be experienced at first, will soon disappear. Benefit to the health will not be wanting.

(Biell, "The Natural Healing Method.")

Cooking Recipes.

RALSTON CROQUETTES.

One cup of cold Ralston Breakfast Food, 2 cups of cold cooked meat, 1 tablespoonful of chopped parsley, 2 teaspoonfuls of onion juice, salt and cayenne to taste.

Mix the cold Ralston Breakfast Food, meat, parsley, onion juice, salt and pepper together, form into croquettes; dip in beaten egg and bread crumbs; fry in hot fat.

RALSTON CARAMEL CUSTARD.

One quart of milk, 2 cup of sugar, 2 egg yolks, 1 cup of Ralston Breakfast Food, 2 tablespoonfuls of hot water, 1 teaspoonful of vanilla.

Melt 1 cup of sugar in a saucepan, when light brown in color add the water and work 1 minute.

Beat the yolks of eggs, add the milk, cup of sugar, and Ralston Breakfast Food, cook 10 minutes, stirring frequently, then add the caramel and vanilla, fold into it quickly the well beaten whites of the egg. Serve very cold in Sherbet glasses.

A System of Physiologic Therapeutics. A practical exposition of the methods, other than drug-giving, useful in the treatment of the sick. Edited by Solomon Solis Cohen, A. M., M. D., Professor of Medicine and Therapeutics in the Philadelphia Polyclinic; Lecturer on Clinical Medicine at Jefferson Medical College, etc., Volumes II, Electrotherapy, by George W. Jacobs, M. D., Consulting Neurologist to the German Hospital, New York City; to the Infirmary for Women and Children, etc. In two books: Book II, Diagnosis; Therapeutics, Illustrated. Published by F. Ralston’s Sons & Co., 1212 Walnut St., Philadelphia, Pa. Price, eleven volumes, 522 net.

The numerous illustrations accompanying the text give this work a high value as a reference book.

With its aid a successful attempt at mastering the complicated science of Electro-Therapy will be made easy to any one interested in the subject.
The Care of the Skin.

By the Editor.

One of the most necessary essentials of our everyday life is cleanliness; it is a duty that we owe towards our fellowmen. This social command is obeyed in so far only by most people, that they wash their hands and faces every morning after rising.

In summer many people take a bath in the open, but in winter the dirt is allowed to remain on. Perhaps on a Saturday some people allow themselves the luxury of an entire body ablution or full bath. Not everybody has the advantage of a bath-room. For bath-rooms are only to be found in better houses where the rent is comparatively dear. Those people who do not own a bath-room may, perhaps, once a week or so go to a public bath-house, take a warm bath, and now believe that they have satisfied all demands that could possibly be made on them as to cleanliness.

But often also many people do not bathe at all, perhaps on account of their being afraid to catch cold—or because bathing is an unnecessary expense.

Formerly this was not so. With the ancients the daily bath was a publicly acknowledged necessity. The public bath used to serve social purposes as well. They could take a bath and entertain and amuse themselves as well. Men and women visited the public baths daily just as our men visit the saloons daily, and our ladies give tea parties. This was the custom with the old Greeks and Romans until the period when, on account of a decay of their general morals the hygienic habits had to suffer as well.

We are almost tempted to ascribe part of this fault to the expansion of Christianity in its first stages. Because, in spite of the baptismal act, which in itself signifies a purification, the first Christians thought it to be a moronic. This was the custom to castigate their “flesh” and to be indifferent to the care of their persons; because they thought the latter to be a peril to their soul’s welfare.

They chastised their bodies; and corporal uncleanliness was one of the principal parts of ascetism. The bath was considered to be a “heathen” institution and tradition, and thus the daily baths came gradually into oblivion.

In the Middle Ages there did however exist some so-called “bathing-rooms” in which the barbers used also to attend bath-customers. Gradually, however, these bathing-rooms also disappeared and the Germans had the sorry reputation of being the uncleanest nation in Middle Europe, until more recent times, when health-culture in private as well as in public, and especially the bath, came to be better understood. This was the custom with the old Greeks and Romans until the period when, on account of a decay of their general morals the hygienic habits had to suffer as well.

In all greater towns of the continent large baths were erected, although most of them at first, in comparison with the number of inhabitants, were visited rather poorly. Statistics show that in towns of about 130,000 inhabitants only about 100,000 baths were taken during the year—which would mean one bath in a year to each inhabitant, because 30,000 might have bathed at home.

About this time men like Priessnitz, Schroth, Rausch, Hahn, Bikili and later on Knipp and Kuhne began to propagate the new theory of a water-cure treatment, and thus reawakened a sensible way of taking care of the skin in health and sickness. One may think about the above-named men as one well phrases, but one point is certain, that they caused many a man, who previously did not consider cleanliness and skin-care necessary any further than to wash his hands and face, now to extend the ablutions to his entire body and with one word to pay attention to the care of his skin.

The skin serves, as well as the lungs, intestines and kidneys, not only as an organ for secretion, but also aids to regulate our respiration and body-heat. It shows us faithfully our inner corporal condition, as it stands in close relation to the functions of each of our organs. The healthy condition of the surface of our skin influences the welfare of our entire organism, just as well as the latter again influences the healthy condition of our outer skin.

Does not the pale-bloodless skin of most of the people living in the large cities clearly demonstrate that their general corporal welfare is not in the very best condition? Does it not clearly demonstrate in such a pitiful manner that they lack light, air and sun, have too little exercise in the open and that they therefore become town-sick? Their emaciated features and paleness of their fates, varying in color from gray to yellowish, tell plainly of their bad mode of nourishment, and of other pernicious influences reacting upon their bodies.

Do we not perceive the influence of bad ventilation in the public schools, in the colorless cheeks of our children, who must pass the best years of their golden youth in these schools, which we might call “human stables,” and who being overburdened with school-hours and house-work consequently are lacking that which is necessary to both body and soul, if they shall develop healthy and harmoniously, i. e., light, air, sunshine, appropriate nourishment, corporal exercise and rest?

Let us now begin our contemplation with the skin, its construction and functions. The skin of our body, which consists of three layers lying over each other, encloses these separate portions like a sack, which holds all the articles contained in it. It would be an error however to consider the skin only as a general covering, or protective fold, or perhaps as an enclosure against the surrounding air. On the contrary, the skin is, as our readers already well know, a continuous means of communication with the outer air.

The extreme or upper skin commonly called epidermis, which is very tender and possesses neither nerves nor blood-vessels, consists of jumpp fine layers of cells, which lift themselves from the underlying so-called leather-skin, and gradually die off, drying into a horny mass. For this reason the upper skin can only be looked upon as a protective-cover in a very restricted sense, as it protects the real skin, or leather-skin, and also acts as means of communication with the outer light, air and warmth, etc., etc. The lower part or mucus layer of the upper skin, which rests upon the corpuses of touch or warts of touch of the leather-skin, gives the bias to the coloration of the skin. The coloring matter of the skin is contained in the kerneiy cells therein, as for instance you can verify in colored people.

The lowest layer of skin or underskin, also called
skin, which consists of a loose soft texture, in fend under which there develops a greater or lesser deposit of the fatty matter, lies only very loose towards the inner side of the body and serves the purpose of forming a kind of a pillow and to adorn the form of the body with a certain roundness and fullness.

The most important skin-layer is the middle one, and, strange to say, it is called in man the "leather-skin," because from this skin-layer in animals leather is manufactured. This leather-skin forms the foundation of the general covering of the body.

Its upper portion, which contains the layer of cells and nerves of touch, is covered by the membraneous layer of the epidermis and its lower part is joined to the beneath-lying parts of the body by the cellular system of the underskin.

The leather-skin consists of an elastic, closely-fibrwoven fibrous tissue, containing numerous nerves and blood-vessels. There are, furthermore, in this leather-skin a great quantity of glands for secreting sweat and fatty substances, also sweat-channels, wart-like formations and hairs with their roots.

The nervous system of the leather-skin is composed mostly of the so-called nerves of touch. These nerves are so close together and are so numerous that one might mistake them for a compact tissue. This vast skin-nerve tissue lies open and immediately under the upper-skin and includes a large portion of the nervous substance of the entire human organism.

The entire nervous system of the skin is through the two nerve-centres, the brains and the marrow, in continuous contact with all the remaining nervous system of our body, so that it is evident that impressions or irritations upon the skin-nerves must also create an irritation upon the remaining nervous sphere.

From the above facts may be clearly seen how very important the skin is for the entire vital functions and what detrimental effects not only may arise from defective treatment of the skin, but also what great importance is to be attributed to an appropriate treatment of the skin by water, air, light, warmth, dress, bedding, etc., for healing purposes.

The numerous blood-vessels which are contained in the skin are lying somewhat deeper than the skin-layers and are so close together that any, even the smallest wound—for instance, one caused by the point of a needle, perforate several of them, as may be seen in the immediate appearance of blood-drops. The vessels of the skin consists partly of veins, i. e., those that are filled with dark-red blood, partly arteries, partly capillary vessels, i. e., transparent, thin and fine connecting passages between the veins and arteries. The coatings of these capillary-vessels are so extremely tender and fine that they permit the ingress and egress of gaseous substances.

Thus they are the means of an uninterrupted change of matter in our bodies and provide for the nutrition of our entire organic system.

By an appropriate beneficial reaction upon the in-organs we are enabled to stimulate the functions of the capillary vessels in favor of a change of matter, and to quicken their action; and by an insufficient or entire omission of the necessary care of the skin we reduce their functions, and thereby disturb and interrupt the change of matter. Although the capillary vessels are present in all parts of the body, only those contained in the skin and the lungs serve for breathing purposes.

Every human being of normal size has about two square yards of bodily superficies and therefore also about two square yards of skin.

In the middle layers of this skin there are about 15,000,000 of small papillae or fleshy warts who partly absorb the little warts of touch, which are the endings of the nerves of sensation, and partly absorb a series of blood-vessels for the warming of the skin. Here to are added about 2,000,000 spiral sweat-glands, each formed like a ball, which are lying underneat the skin, and whose passages perforate them.

(On the back, cheek, upperarm and thigh there are on each two square centimetres 300 to 600 glands; on the forehead, throat, breast, fore-arm, hand and foot 900 to 1,000 glands; on the soles of each foot 2,500 and in the palm of each hand 2,600 sweat-glands.)—(Reclam).

The moisture which is produced by the sweat-glands evaporates continuously on the surface of our skin and gives us thus the necessary cooling. If a greater amount of heat in our body is caused by a quicker circulation, there appear at the outlets, sweat-channels or pores of the sweat-glands, which are deep in the leather-skin, tiny small drops (sweat) which gradually flow together.

The surface of the skin of our body, as is a well-known fact, is, when sweating, damp-moist, and the unimpeded evaporation of the sweat of the skin is the cause of the cooling-off of our skin surface.

In special glands of the leather-skin there is further formed a so-called skin-grease, whose segrega tion is derived from special channels, which run into the skin-surface.

These grease-glands are to be found principally on the hairy surfaces of our body, and the grease-segregatory channels take their direction often towards the capillary bags,* so that the grease-glands have the same common orificles in the skin surface.

The orifices of the grease-secreting ducts (grease-channels) can be distinguished very clearly when the skin shrinks on account of cold or fright. The ends of these channels filled with skin-grease appear as small knots; this peculiar appearance of the skin is sometimes also called "goose-skin."

If the excretory canals of the sweat- and grease-glands (i. e., the pores) are blocked up with dirt, perspiration is prevented. And when this state is continued for some time, then the pores will at last lose their principal qualifications, i. e., their elasticity, as the latter is used too little.

As a sequel of the continued prevention of the

*The capillary bag or pouch or pocket represents a small cylindrical pouch, which encloses tightly the root of the hair. This pouch penetrates deeply into the leather-skin, sometimes even as far as the fatty under-skin tissue. From the bottom of this capillary pouch there is then developed the growth of the hair.
general functions of the pores, they do not close themselves any more in cold weather and do not expand any more in hot weather, and do not any more let out the gaseous exhalations of the skin. And anyone understands that the retention of the exhalations of the skin causes a great many detrimental effects to the human body.

The daily ablution of our entire body-surface, therefore, is not only intended as a cleansing, but also fulfills the purpose to keep the conductive-channels of the sweat- and urine-canals always open. A person of cleanly habits is always more or less hardened; one of uncleanly habits is more or less effeminate.

In a cleanly person the skin-exhalation takes place promptly, his other secretory organs also act regularly, his metabolic assimilation is active and lively, his blood-circulation uninterrupted, his juices and his blood are pure, his muscles are firm and stretched, his skin is ruddy and shiny, he is courageous, vivacious and energetic.

An uncleanly person on the contrary is languid, pale and bloated. In the proportions of his vital bodily-substances: albumen, fat and water, the two latter, fat and water, predominate, and are deposited in the cellular tissues of the under-skin. The movements of the unclean person are languid and without energy, the suppressed skin-exhalation causes inactivity of the digestive organs and general chilliness and shivering. To remedy his frosty condition he puts on one shirt over the other, covers himself in winter altogether up to the tip of his nose, is afraid of the very least draught.

 porque the impeded metabolic assimilation, the obstructed skin-diffusion, the blocked-up, inactive skin-pores rob him of every possibility to feel any kind of satisfactory bodily and spiritual welfare.

Because the impeded metabolic assimilation, the obstructed skin-diffusion, the blocked-up, inactive skin-pores rob him of every possibility to feel any kind of satisfactory bodily and spiritual welfare.

By using cold or cool water for washings, and ablutions or baths, and under the necessary precautionary measures letting the water react upon our skin, we deaden the so-called susceptibility to colds, with other words we are enabled, by continually accustoming our skin to cold through reaction of cold water, to weaken the effects of sudden changes of temperature upon our skin. At the same time we thereby induce an increased activity of the pores, skin-nerves and capillary-vessels of our skin, promote the exhalation and blood-diffusion and thereby make our entire constitution impervious against the disadvantages of outward influences or with other words we get hardened.

As experience teaches, this kind of hardening with water, once begun, must be continued to remain effective. If discontinued, then the skin will soon return to its former effeminate condition.

Care of the skin and bathing during our days of health are the best preventive against a number of diseases.

Every person of decency, who has an interest for his own skin, and what is inside of it, should, in order to remain healthy, and to be agreeable to himself and others as well, not omit a daily ablution every morning of his entire body-surface—that is to say, with cold fresh water.

Cold water is always preferable to warm water, as it not only cleans just as well, but also irritates the skin-nerves by its temperature, and thus stimulates not only these, but the entire nervous system.

A general well-feeling is the recompense of each vigorous cold ablution, which not only enlivens but also warms the entire constitution.

The cold ablutions of the entire body which adult people should never omit summer or winter, should only be undertaken in a room whose temperature is about the same as the open air in summer time. In winter, therefore, the room should be well heated and should have a temperature of about 60 to 65 deg. F. to avoid catching cold. It is best to take the entire ablutions every morning, immediately after leaving bed. A moderate sweat even in this case need not refrain you from the daily ablutions, as not having been caused either by work or exercise, there is neither accelerated lung or heart-action. Only the room need to be sufficiently warm—i. e. 60 to 65 deg. F.—and everything necessary for the ablution should be at hand.

A vessel with water—a large pail or basin, a strong washing towel——about half a yard broad and about three-quarters to one yard long. one or two larger (not too fine) towels for drying oneself, a woolen blanket or a small piece of carpet, whereupon to stand during the ablution, and a pair of felt-lined slippers are all the requisites necessary.

Whoever is not yet used to cold ablutions may start with a temperature of 75 deg. F. and gradually lower this temperature as he gets more hardened and used to it, but don't use any water in winter that is less than 50 to 55 deg. F. to avoid catching cold. It is best to take the entire ablutions every morning, immediately after leaving bed. A moderate sweat even in this case need not refrain you from the daily ablutions, as not having been caused either by work or exercise, there is neither accelerated lung or heart-action. Only the room need to be sufficiently warm—i. e. 60 to 65 deg. F.—and everything necessary for the ablution should be at hand.

A vessel with water—a large pail or basin, a strong washing towel——about half a yard broad and about three-quarters to one yard long. one or two larger (not too fine) towels for drying oneself, a woolen blanket or a small piece of carpet, whereupon to stand during the ablution, and a pair of felt-lined slippers are all the requisites necessary.
become warm. Now dry quickly,* head, neck and upper body, put on a day-shirt, and start washing the buttock and genitals, lifting up the shirt with one hand. Now wash thighs, legs and feet. Each leg should be washed separately, and be dried at once. The feet, especially the spaces between the toes, should be well dried, to prevent sores. Now finish dressing completely, walk quickly up and down the room several times, or take some exercise in the open.

This procedure has been so fully described to prevent any mistakes, so that no one should claim that he has caught cold by following the above instructions. Whoever will follow above directions precisely may rest assured that he will never thereby catch cold. I but will harden and fortify his skin and his constitution instead and prevent many diseases arising from an insufficient care of the skin.

The best way to prevent "colds" is to "catch cold" every morning. This entire bodily ablution can be undertaken everywhere, even while traveling. Whether the hair of the head should be included in the daily washing depends upon the length of the hair. Anyhow the head must be dried thoroughly after each such ablution.

In summer, especially when there is no opportunity of bathing in the open, an entire body-ablution may be repeated before going to bed without detrimen to one's health. The procedure is the same as in the morning. Even if one is very tired, or when one has been perspiring very much on account of the great heat, these ablutions are not to be neglected, as they refresh and recuperate the body.

Through the daily ablutions the skin not only becomes finer and more active, its looks ruddier and fresher, but even the skin-exhalation becomes less odorous and more agreeable.

Women Need a Simple Life.

In writing of the boasted progress of the last century "An American Mother" asks in The Ladies' Home Journal for June: "What has the nineteenth century done to the woman herself? Are her school training, her colleges and her work in art and literature making her a more womanly woman, more fit to be a wife and mother? If not, they are losses to her, not gains. The chief change which the last century made in the American woman was that it tempted her to give up for the new occupations of art, reform and money making, her own real work as a home-maker, wife and mother. The nineteenth century has dragged our women from their natural base. It has given them noble surroundings for their lives; literature, art, social power. But they are not content. They are nervous and restless beyond any former race of women. The food given them is too light. They look out on the world with starved eyes. The wiser among them are finding out that what they want is not show and public work and applause, but a simple life, repose, and the homely affections of home."

*The process of Not-Drying-Ourselves is one of the healing factors of the Kneipp-Method—we have already described it in full in our February number.
Address to the People of St. Paul, Minn. on Vaccination.

By Dr. J. A. Clausen, of St. Angar, Iowa.
Second Vice-President of the Anti-Vaccination Society of America.

1901.

Mr. President, Members of the Anti-Vaccination Societies of St. Paul and fellow citizens of this United States of America:—

First of all, we will consider the individual's rights. The right of man to his own body and the control and protection of his children's bodies, is the most essential of all rights. And it is actually necessary at this time and date that the people of this country should call a halt upon the impositions of the tyrannical officialism which overrids their most essential right. It is a disgrace to all American citizens that more than one hundred and twenty-five years are required for them to fit themselves to accept the freedom secured for them by the Declaration of Independence and the Constitution of the United States of America.

It is enough to make a true American citizen black and blue with rage to see that a few bands of fanatics are high-handedly riding over a nation of 70,000,000 people in spite of all their constitutional rights. The toleration of the Prohibition fanatics, the Sunday fanatics, the God in the Constitution fanatics, is all a scan- 

We could cite evidence to fill a book. But it is general known that the medical profession that vaccines the public into a hospital, and in reality is the old practice of inoculation with small-
pox virus, which is made a statutory crime by all civilized nations. The State Board of Health can start a small-pox epidemic at will, and it will every year from now on if the people will permit it.

3. The Civil Officers Rights.

The civil officer's right is to know that he is sent to execute an order that such order is lawful. It is a scandal upon our judiciary to permit a superior official to go unpunished, when it is proved that such officer, through his own over-foolishness, caused the murder of an inferior officer.

The Health Officer of Albert Lea, Minn., is as guilty of the murder of Mr. Randall as if he had killed him with his own hands, and, in my opinion, all police officers in Minnesota should protect themselves from a similar fate by vigorous prosecution of the doctor who caused the murder of Mr. Randall. They should also be very careful in all executions coming from the Board of Health Department, inasmuch as such boards have been proved to be irresponsible

Thousands of physicians understand the fraud of vaccination and it is their right to guard their friends against this foolish practice. To permit a law or ordinance which directly or indirectly practically overrules the constitutional rights between a physician and his patients, is a gross insult to the medical profession as a whole, and we dare say that the medical profession will candidly admit this statement to be correct, no matter what their opinion of vaccination may be. No one but the meanest and lowest in the medical profession would feel honored by being made a medical gallipot for a band of medical diplomat ward heelers calling themselves a Board of Health. Another thing, which should, or ought, to stir the pride of the profession is the practice of allowing medical men to become members of Health Boards; it smacks too much of fraud and a scheme to put in good work for selfish profit. There are plenty of men outside the medical profession who might better be trusted with the office than any professional man; both the medical profession and the public in general would be better served. Any sane man knows that the prosperity of the physician is in time of epidemics and much disease, and this alone is reason enough not to permit a physician to act as a member of a Board of Health nor to punish people for treating one another as we do now. There are many honest and upright men in the medical profession, but I believe that they also have a larger share of frauds than any other profession. Under the present protection laws, a scoundrel of a physician can play the confidante man with impunity for his own enrichment, and if his victims get tired of him and undertake to do what they can for themselves, he can retaliate by prosecuting them for practicing medicine. There is not one honest doctor who approves of such a state of things, and not one person outside of the profession ever approved of it except through a misunderstanding caused by a misrepresentation of the facts, or else, a cash consideration, which is freely used in the law-making chambers by the class of physicians who expect to gain prosperity and prestige by such more than foolish acts. The respectable members of the profession are fast becoming ashamed of the scoundrels, aim little stir on their part and a little by the general public would, in a short time, burst this disgraceful bubble of the medical confidence men and stupid legislators.

5. The Criminal Vaccinator.

From where did he come? His home is in far and he is not a physician but a priest, dealing out if sacrament of the small-pox goddess whose name is Mahal

The Hindoos used to inoculate themselves with small-pox in order to appease the goddess, fancying that if they did so perhaps her majesty would kind permit them to escape lightly. The Turkish consuls embraced this religion in 1721, and the English an ambassador's wife, Lady Worthy Montague, of course, to be in the swim at court, found it an easy thing to embrace this, to her, new religion, and by her skill effort it was introduced into England, and, as a result, small-pox epidemics became more common. This in time, produced heretics who lost all faith in inoculation and looked for something better. The want was supplied by the smart alecks among the hostler who started the yarn that people who had once been affected by cow-pox could never get the small-pox and many people in the country embraced this new protestant religion of the Matah faith. It is positive known that a farmer named Benjamin Jesty had a ministered this new protestant sacrament to two of his sons twenty years before (1796) when the Mart Luther (Jenner) permanently established this protestant religion in England, from whence it spread the whole Caucasian race of man. As I have mentioned before, the protestant cow-pox sacrament has reality given place to the original small-pox sacrament of the mother faith. There are several reasons for this theological retrogression, which are as follows:

First of all, the cow-pox is not as reliable to start small-pox epidemic as is the original sacrament small-pox. Second, cow-pox inoculations have been found more dangerous as an infection, than the small-pox inoculation, and in the next place, it is none of a people's business to know whether the Matah pries use the sacrament of this or that High Priest, as they are all standards.

And here you have them! 1. Jennerian equine (horse virus) ; 2. Sevina virus with which Jenner inoculated his eldest son. 3. Hor virus, cow virus or horse grease (pus) passed throug the cow. 4. The Brangen virus. 5. Seely & Babcock's virus which they were greatly injured. 6. The Brangen virus. 7. The Passy virus. 8. Dr. Walomottom's can virus, supplied to the royal family in England, 1, which they were greatly injured. 9. The Saurab virus, invented by Major W. G. King, and used in India and Burmah. 10. Dunkey virus, discovered in India and used in the country. 11. Buffalo virus, discovered in the swine and many people in the country embraced this new protestant religion of the Matah faith. There are several reasons for this theological retrogression, which are as follows:

First of all, the cow-pox is not as reliable to start small-pox epidemic as is the original sacrament small-pox. Second, cow-pox inoculations have been found more dangerous as an infection, than the small-pox inoculation, and in the next place, it is none of a people's business to know whether the Matah pries use the sacrament of this or that High Priest, as they are all standards.

And here you have them! 1. Jennerian equine (horse virus) ; 2. Sevina virus with which Jenner inoculated his eldest son. 3. Hor virus, cow virus or horse grease (pus) passed throug the cow. 4. The Brangen virus. 5. Seely & Babcock's virus which they were greatly injured. 6. The Brangen virus. 7. The Passy virus. 8. Dr. Walomottom's can virus, supplied to the royal family in England, 1, which they were greatly injured. 9. The Saurab virus, invented by Major W. G. King, and used in India and Burmah. 10. Dunkey virus, discovered in India and used in the country. 11. Buffalo virus, discovered in India and used in the country.

Now, dear ladies, if you desire to be in the swim with the Asiatic Turks, and with the State Board <
The Kneipp Water Cure Monthly.

Health Terms, you must do like Lady Montague, embrace the Matah religion, do penance, and have one of the mentioned sacraments administered to torture your body in honor of the goddess. Some of you may doubt the religious nature of vaccination, but let me tell you! The State Board of Health do not, and to prove this to you, I will give you a quotation from the pen of the Iowa State Board of Health Secretary, Dr. J. T. Kennedy, in the Iowa State Board of Health Bulletin, Vol. VIII., p. 52, where he says: "Nearly all well-regulated families, Jew and Gentile, felt it their duty as parents to see that their offspring in early life had the protective influence of baptism, or circumcision, and vaccination. It would be well for Iowa parents to go and do likewise."

If you have the least little sense, you can plainly see that vaccination in the Matah religion is a sacrament equivalent to circumcision in the Jews and baptism in the Christian religion.

Now, then, when the State makes any religion in the State religion and compels its inhabitants to accept that religion under penalty, it is performing an unconstitutional act.

6. The Proper Way to prevent and treat Small-Pox.

We will now take a look at the means scientific men make use of to prevent and cure small-pox. Dr. Geo Burton says: "Small-pox is a syphotic disease. It originated in decomposition and is powerless against cleanliness, within and without. Zymous implies fermentation and fermentation is one of the earlier stages of decomposition. Dr. Carl Spinzig, in a paper read before the St. Louis Medical Society, Jan. 15, 1881, states that the eruptive character of small-pox is the outward manifestation of a process of decomposition of the blood produced by an excess of urea. Urea is the product of waste in the tissues of the body and is usually eliminated by the kidneys. Normal human blood contains about two per cent. of urea, while the blood produced by an excess of urea contains about eight per cent.

Blood contained about two per cent, of urea, while the blood produced by an excess of urea contains about eight per cent. Urea is equivalent to circumcision in the Jews and baptism in the Christian religion.

Remember, once for all, that the negro who criminally assaults a child is no more criminal and selfish than is the white man who vaccinates the child, and the latter should speedily receive the same attention which is usually given the former; while the band plays the Rogue’s March.

The Breath of Life.

A herald of the kingdom coming, in new divine—human—By Rev. S. C. Greathead, Editor, Published monthly by the "Breath of Life" Publishing Co., Clifford, Mich., U. S. A. Subscription: $1.00 per annum. Special offer: $1.50 for three years. Subscription: $1.00 per annum. After that date, regular price. "The Breath of Life" will be an exponent of full salvation for spirit, soul and body. As the first (June) issue will necessarily be limited, all are requested to send in subscriptions at once, or 10 cents for sample copy.

"The Breath of Life, and How to Breathe It for Spirit, Soul and Body," with full descriptions.................. 25c

"The Breath of Life, and How to Breathe It for the Prevention and Cure of Consumption," No subscription at once, as the edition will be limited, 25c.

Diet Treatment for Stomach Complaints

By the Editor.

Cause: It is no wonder that so very many persons suffer from this complaint, if one considers all that is given to the poor stomach to get through with, or digest. As long as man is still able to go about, nobody dares talk to him about overburdening his stomach; no, that is all nonsense. It is useless to object to some dish or other or some beverage—nobody listens. Three years ago I warned a lady she should beware from eating and drinking everything so very hot, but she only laughed at me. To-day the mucous membranes of her stomach are so hardened, that there is no possible hope for her; the lady would willingly give all her fortune for a recovery, but she is doomed—and all through her own fault.

Some time ago I had a conversation with a gentleman about a non-stimulating diet, and he remarked that he had already lived some time up to it. He then ordered from the waiter a plate of hot, spicy Hungarian Gulash,” and when he got it, he added a lot of pepper and mustard to same.

These two cases may suffice to prove how little people in general think about their poor stomach, and the gentleman belonged besides to the “educated class of people.”

The beginning of a stomach-complaint is generally a repeated “disordered stomach,” commonly after some “festivity” or “Sunday feast.” In order to excite the appetite again all kinds of sharp appetizers are eaten, and that is the first step to ruin.

In such cases one should allow the stomach a little rest, a little hunger won’t hurt you, or only eat light, digestive soups and a little fruit.

After this “disordered stomach” has appeared repeatedly, then dyspepsia sets in and afterwards catarrh of the stomach, spasm in the stomach, abscess in the stomach, hardening of the stomach and at last cancer of the stomach.

Stomach-complaints may also arise from too cold or too hot food, vegetable, mustard, etc., through colds or through drinking very cold water while still being very heated at the time. Also through anger, especially when anything is eaten or drunk, although still angry,—you should rather wait till your anger is over. I recently met a gentleman who, through anger on account of continuous irritation by his superior, got such a severe stomach-complaint that there is hardly any help for him at present.

Whoever is compelled to bear loadings continuously is also liable to get some kind of stomach-complaint! Sometimes, however, some nervous disorder is mistaken for a stomach-complaint. But as soon as the general health is re-established, then the stomach and digestive troubles also disappear completely.

Symptoms: Digestive troubles swelled stomach with or without pains, constipation of the bowels, cold feet, headache, general bad humor, in short, a condition in which one feels neither alive nor dead. If there is an abscess, bleedings will also be apparent.

Treatment: Although the diet for each specific case should be appropriate to the patient’s condition the following distinctions may be made:

In light Catarrh: Strict non-stimulating diet, rather let the patient hunger a little, and drink only very little; but if very thirsty, give him a natural lemonade.

Further, one to two steam-baths, body-compresses, foot steam-baths, and plenty of exercise in the open air.

Abscess in the Stomach: Fasting is very advisable, so as to give the wound a chance to heal. Give the patient light digestible soups, rice, tapioca, Kneipp’s strength-giving soup, pure gluten food, Kern soup, Ralston health foods, etc.—everything, only moderately warm. If the abscess bleeds, quite and rest is essential, also cooling compresses on the stomach—and take cooling water in sips only.

Chronic Catarrh of the Stomach:* Commonly called hardening of the stomach, is more difficult to heal than either, but even here recovery is possible, if the patient has courage and perseverance. The following diet is the best: Zwieback—but without yeast—Kneipp’s Kraft Zwieback, Lahmann’s Haferbiscuits, Gluten food and crackers, Ralston food, sour milk or curdled milk with whole-wheat bread crusts, Kern soup, eggs with salad, seasoned with a little lemon juice. For a change a well-roasted chicken or a very little game—but generally more easily digested vegetable-dishes—i.e., tapioca, rice, etc. Hard Zwieback or toast is preferable to soft bread, because through the slow chewing process half the digestive work is already done.

Only eat a little at a time, rather eat oftener and everything only lukewarm. As a beverage take cooling, natural lemonade in small sips at a time.

Follow Thy Star.

Follow thy star! What, though the mists of doubt and grief may rise To dim thy weary eyes! What, though the waves of strife and sin may beat Around thy stumbling feet! Follow thy star! Still in the night, though thy weak bark may roll, Its light will comfort and direct thy soul.

Follow thy star! That star which shines within thy breaking heart When all thy joys depart; That star that lives within thy bosom’s core When loved friends are no more. Follow thy star! That star that cheers thee on thy homeward road, That star that leads thee to the throne of God!

—Francis Henry Scott,

Having become convinced by study, and experience, that an immense percentage of indigence and crime, results from drunkenness, physical disease, want of work, or the overcrowding of cities; and that these four evils are caused by the prevalent custom of eating animal flesh, by ignorance* by violation of the laws of health, and by the deviation of so much of the land of our country to boviculture instead of agriculture, it behoves us to put forth every effort to attract the attention of the more thoughtful members of the community to these facts.

HERALD OF THE GOLDEN AG&
Quisisana Nature Cure Sanitarium, Asheville, N. C.

This Institution is most beautifully situated on an elevation, surrounded by 300 acres of woodland, affording most enjoyable walks for the patients.

From the piazzas and every window one has a picturesque and exquisite view of the fine, hilly city and its circle of lofty mountains.

The rooms are large, roomy and well ventilated. The bath rooms are complete for all hydro-therapeutic treatment, and are connected with massage rooms.

Near the bath house are the air and sun baths, with separate departments for ladies and gentlemen. These baths are the great pride of the Sanitarium, as they are the first genuine air baths in the United States, and are very important healing factors.

At the "Quisisana" one has the freedom and seclusion of the country without the dust and smoke of the centre of the city. It is situated on the streetcar line between the depot and the post office, and it is only a fifteen-minutes walk, either way.

Nature Cure is a treatment by which the natural healing power of the body assists in effecting a cure. This natural healing power is a mighty factor put into every human body by Nature. It may be called the Individual Physician. It watches over the body faithfully, repairing quickly damages which it could not prevent. Of this we have many proofs.

- A bone is broken, directly this healing power sends a kind of cement (callus) to unite the ends, and then it sets diligently to work and the healing process is completed.

When bleeding takes place from a wound, what does this healing power do? It stops the flow by coagulating the blood (formation of fibrin). If you have eaten anything which cannot be digested, or which, entering the blood, would harm the body (as in case of poisoning), this natural healing power tries to expel it by vomiting and diarrhoea.

Pain is the warning signal of Nature, which wishes to show that somewhere in the body disturbances have taken place, or that an organ is overworked. These are only simple illustrations, but this natural healing power is just as active in the most complicated diseases, and in the highest functions of the body. Our duty is therefore to help this power, and to direct it into the right channels. For instance, in bone fracture we need only bring the two broken ends together (which, however, is necessary for a complete cure), the rest is done by Nature.

If this natural healing power is not strong enough, as is often the case in weak constitutions, and in many chronic diseases, we must stimulate it. How can we best accomplish this? The surest and safest method is to use those means which we derive from the structure and functions of the body, and those healing factors which are necessary to a healthy organism—air, light, sun, water, warmth, cold, motion, rest and food. To these ends we use air-baths, light-baths, sun-baths, and water in its manyfold forms (cold, warm, steam, etc.), packs, Swedish movements, massage and proper diet.

Air is the element of human beings, without it they cannot live; their health is made by pure air, and injured by impure air. A person must breathe day and night the oxygen of pure air to keep the blood healthy and so receive the necessary strength for work. How many provide for themselves this pure
THE KNEIPP WATER CURE MONTHLY.

The New BHz Book.

The Natural Method of Healing, a complete Guide to Health by F. E. B£, POTKEMAN AN Proprietor of the BHz Sanatorium at Radebeul, Dresden, Germany. In two elegant bound volumes, Trarituted from the latest (One-Hundredd) a portrait of the author and more than 720 illustraions, numerous colored plates and several color folding models of the Human Body and its Organ Published by F. E. Bilz, Leipzig, London, Part Price $8.00 the two volumes.

To be obtained in New York from the Kneip Magazine Publishing Camp., 111 E. 59th St.

It is a fact that the Natural Method of Healing is regarded with very little attention and considerate by the people of the United States. Why is this?

MERELY BECAUSE ITS LAWS ARE TO SIMPLE!

For with its simple prescriptions of diet, applications, sun-, air- and light-baths, etc., t Natural Healer or better the Naturopath, in opposition to the Allopath (Drug Doctor) cures (not only men ameliorates temporarly) all diseases, of whate_ ied they are curable.—The above mentioned fundamental healing factors remain constant, but the forms of their application vary infinite and have to be adapted to the constitution and in virtual strength of each single patient.—All, that a Naturopath requires of his patient is only: Absoli Confidence in his method, (which is the only correct one), an unswoering obedience to all his instructio and a firm will. If the patient possesses these quaii the Natural Healer can generally guarantee a perf cure.

The purpose of this great work is to gradua impress the immense value of the Natural Met! of Healing on the Public, who turn their backs ur it, not because they know it—but because they do not know it.—To make this work even more useful there are appended a series of treatises which must o practical value to all—as they contain full directi- as to Mixed Diet (preparation of food), Curative Gj nasties, Lung and Breathing Gymnastics, Ventilati Massage, Artificial Respiration, Diseases of Wear Swimming, Magnetic Treatment, etc., with upwarc 700 illustrations.

For all who know how to appreciate it, this book will be a faithful counsellor in days of sickness:

Its two-thousand pages of reading matter has been divided into two elegantly bound volumes, price is $8.00, which is certainly not a large sum w considering that its purchase will ensure the pttrels all future expenses as Doctors bills, drugs and m cines etc.

As this work contains full information relating almost every disease that humanity is prone to, would certainly advise our readers not to omit the portunity of obtaining this great book at once.

THE EDITORIAL STAFF.

THE KNEIPP WATER CURE MONTHLY.

air by sleeping with open windows? They prefer breathing the poisonous gases of their system over and over again, which poisons their blood and their organism, rather than breathe the fresh night air which is so much better. The atmosphere of night is purer than that of day, especially in cities that are full of smoke and dust.

The "Quisisana" is a quiet, beautiful family Sanitarium, an ideal place for patients that really wish restoration of health. Many persons are worn out, nervous, tired, worried, and would never become well and strong if they remained at home with the same household "batties and businessears upon them. Nor could they grow strong in a large, crowded, noisy sanitarium. For such the "Quisisana" is an excep- tional resort, for yet it is a small family Sanitarium, quiet, and with all the comfort of home life.

The spirit of the Institution is such a bright and happy one that all feel like members of a well-cared for family, who, under the guidance of experienced physicians, learn to live according to a hygienic sys- tem that prevents the development of disease. This is the greatest benefit, besides their cure, the guests and patients receive at the "Quisisana." Their expressions of gratitude and appreciation on leave-taking are an assurance of the great advantages afforded by this modern Temple of Health.

Wedding Bells.

On Tuesday, the 9th of June, there was celebrated at St. Patrick's Cathedral, Fifth Ave., New York, the wedding ceremony between Mr. B. Lust of New York, and Miss A. Streble of Bellevue, Butler, N. J.

Mr. Benedict Lust will be known to our numerous read- ers as the editor of this magazine, and as a director of the New York Naturopathic Institute and College, 135 E. 58th St.

The bride has for several years past had charge of the Bellevue Sanatorium in Butler, N. J., and by her literary abilities as well as accumulated experience in her travels around the world will be a good and valuable helpmate to her fortunate "Benedict Half.”

After the church ceremony, a wedding breakfast was given at the Arion Club, where it was noticed by some of the guests belonging to the editorial staff of this paper, that the copious table, loaded with refreshments and deliciously every description, was not in strict keeping with the “doc­ trines of the Kneipp.” However, they consoled themselves with the thought: Errare humanum est—and enjoyed the given opportunity.

After a reception, which was held by the bride and bridegroom at 135 E.58th St., and which was honored by the people of the United States. Why is this?

THE KNEIPP WATER CURE MONTHLY.

Water Applications.

By the late Mgr. S. Kneipp.

The water-applications which I make use of are divided in:

A. Wet sheets.
B. Baths.
C. Vapors.
D. Gushes.
E. Abotions.
F. Water packages.
G. Drinking of water.

1. Covering with wet sheets.

A large, coarse piece of linen (such as used for straw-mattresses does very well) is folded 3, 4, 6, 8, or 10 times lengthwise, wide and long enough to cover the whole body, beginning at the neck. The sheet ought not to end on both sides as if cut off, but hang down a little on the right and left of the body. The so prepared sheet is dipped in cold water (in winter, warm water may be used) well wrung out and then put on the patient lying in bed in the way described above. A woolen blanket or a piece of linen doubled 2 or 3 times, is laid upon it, in order to close the wet covering tightly, to thoroughly prevent the entering of the air; the whole is covered with a feather quilt. As a rule I wrap a rather large piece of woolen material round the neck, to prevent the air entering from above. Care must be taken that the body be warm.

The wet sheet is applied from forty-five minutes to an hour; if longer duration is prescribed, in order to operate by cold, the sheet having been warm, must be wetted again in cold water.

As soon as the prescribed time has expired, the wet sheet is applied from forty-five minutes to an hour; if longer duration is prescribed, in order to operate by cold, the sheet having been warm, must be wetted again in cold water. The covering is done as stated before.

This application operates especially on the expelling of gases detained in stomach and bowels.

This practice, like the following ones, demands that the body be warm.

2. Lying on wet sheets.

To the covering with wet sheets corresponds the lying on wet sheets, which, in case both applications are used alternately, must be applied first. The following remarks are to be made regarding it.

As this application is also to be made in bed, a piece of linen, and over it a woolen blanket, are laid upon the mattress, to prevent it from getting wet. Then the same piece of coarse linen, as used for the preceding application (doubled 3 or 4 times), dipped in water and wrung out, is placed lengthwise upon the blanket, so that it reaches from the end of the neck to the end of the back-bone, i. e., the whole length of the back. The patient lies down on his back, wraps himself up in the extended blanket from both sides, in order to prevent the air from coming in, and then covers himself with a blanket and feather-quilt. This lying on wet sheets is also to be applied for three quarters of an hour; if longer, the wetting of sheets with cold water must be repeated, because its effect, like that of the covering with wet sheets, is produced only by cold. The same rules as given above are to be followed.

This application is especially effective for strengthening the back-bone and the spinal-marrow, for pain in the back and for lumbago. I know many cases in which lumbago was entirely removed by two applications of wet sheets made on the same day.

Also against congestions, in the heat of fever, this lying on wet sheets is of very good effect. In which individual cases it is to be used, and how often it is to be repeated, is said in the part of this book where the diseases are spoken of.

3. Covering with and lying on wet sheets used in one application.

The two applications can be taken one after the other or both together.

The sheet for lying on is prepared as given in No. 2; that for covering likewise prepared, is laid near the bed-side. The patient lies down undressed on the one wet sheet and covers himself with the other. The final covering with blanket and feather-bed is easily done. If there is another person attending it, it is well to tuck in both blanket and feather-bed on both sides, to prevent the entering of the cold air. It is important that the blanket, lying under the wet sheets broad-wise, be large enough to wrap up both the wet sheets like a bandage.

The duration of this application ought not to be less than three quarters of an hour, and not more than an hour.

Against great heat, gases, congestion, hypochon-driasis, and other sufferings it is of very great service.

The patient lies in bed. A piece of linen, folded 4 to 6 times, dipped in water, and thoroughly wrung out, is laid upon the abdomen (from the stomach downwards) and covered with the shirt and finally carefully with blanket and feather-bed.

The application may be made for three quarters of an hour to 2 hours; in the latter case, it must be renewed after an hour, i.e., wetted anew.

This application is of good service against indigestion, cramps, also where the blood is to be led away from the chest and heart.

For wetting the linen vinegar is very of use instead of water, also decoctions of hay-blossoms, shave-grass, oat-straw, etc.

In order to save the vinegar, a twofold piece of linen doubled 2 or 4 times, which is dipped only in water. The covering is done as stated before.

I have been asked many times what principles I follow with regard to coverings with ice, bleeding, etc. These I will briefly state.

Whoever wishes to reconcile himself with an enemy, and for this purpose offers him his hand with knitted brows, will find greater difficulty in succeeding than if he met him with a bright face and a joyful heart. It is something similar to this with ice and water. I have always considered the application of ice, especially on the nobler parts of the body, (head, eyes, ears, etc.) to be among the most rugged and
THE KNEIPP WATER CURE MONTHLY.

violent remedies ever used. They do not help or en-
courage nature to recommence its work; they force it with violence to do so, and that must revenge itself.

I do not repeat and ice-bags, or whatever the names of those things may be, are entirely excluded from my department. Only imagine these enormous counter- actions: inside the patient, a mountain of ice, and between them a suffering mem-
ber, the organ of tender flesh and blood, worked on by both. I have always waited with great anxiety for the result of such work, and in most cases my anxiety was justified.

I know a gentleman who was ordered to have ice laid upon one of his feet day and night, for a whole year long, without any interruption. It would surely take nothing less than a miracle to prevent this mountain of ice from taking away not only all heat, but also the indispensable natural warmth! Nothing was to be seen of the healing of the foot.

But, some one will reply, in many cases it has really done good. Yes, for it may be that the disease could not withstand the means of compulsion. How-
ever, what were the consequences? Innumerable persons have come to me who had partly lost their eye-sight, become more or less deaf, others with rheumatics of every kind, especially in the head, or with great sensibility of the head, etc. What was the cause of all this? "Yes, there, and then," I was an-
swered, "the tiresome ice-bag did it; I have been burdened with this complaint for so and so many years." Certainly, and most of them will be burdened with to last breath.

Nevertheless, I oppose absolutely any ap-
plication of ice, and I assert, on the contrary, that water, applied in the right way, is able to soften and to extinguish any heat, even the most violent, in what-
ever part or organ of the body it may raging. If a fire can no longer be put out by water, ice will do just as little for it; that is easily understood by every one.

I said just now that a regular application of water will bring help. But I do not mean that for instance with an inflammation in the head, it would be advis-
able to use as many packages as there were ice-bags formerly used; 100 ice-bags and packages will not stop the blood rushing to the inflamed spot and there-
by increasing the heat. I must try to lead the blood away, to distribute it to the different other parts, i. e.

I must make applications on the whole body, besides those on the suffering part. I shall e. g. attack the enemy in the head, first of all at the patient's feet, and then gradually proceed up the whole body.

Nevertheless, the ice is of good service to my water-cure by indirect use. In summer it cools the water, when it is getting duke-warm.

What is my opinion with regard to bleeding, leeches and all the different kinds of blood-extrac-
tions? Well, I will state it plainly. Fifty, forty, thirty years ago there was seldom a woman who was not bled 2, 3 or 4 times a year; the half-holidays and, of course, the most favorable days were faithfully chosen for this purpose in the beginning of the year and marked in the calendar with red or blue strokes. The country-physicians, the surgeons and barbers, them-

selves, called their own work in this way, a real butch-
ery. Institutions and convents, too, had their ap-
pointed time for bleeding and the strictly regulate

diet above all. Congratulations were made to on

another after hairing endured the bloody toils, while

may have been no small only sometime. The crea-
time assured me that he had undergone this blee-
ing for 32 years, the process being repeated 4 times

every year, and each time he lost 8 oz. of blood, mak

ing in all 8 X 32 = 1024 oz.

Besides this bleeding, leeches were used, 3 or

scarifying and other processes practicin.

Yielding an old, high and low, men and women, were all well pro-
vided for.

How times are changing! For a long time the

doings were looked upon as the only and absolute

necessary means of being and remaining healthy! A

what is thought of them now-a-days? We smile and ridicule this false opinion of the old, this fal

natural-science, to imagine that any man should ha

too much blood! About two years ago a foreign ph

cian, who was also an active literary man, and wh

was following a new school, told me that he had nev

in his life seen leeches.

Many physicians attribute the poverty of blood the

present days, to the former misuse of bleedin

They may be right; however, this is not the only ca

use of it.

But to the subject! My conviction is this: In the

human body everything corresponds so wonderful

the particle to the part, and every part to the who

that one cannot help calling the organism of the bo

an incomparable work of art, the idea of which cot

only originate in the creative mind of God, and t

execution of which no blood can be prepared. If this essence

About the Correct Food
to be Given to Very Young Children.

By Dr. Rosch.

Which food is most appropriate for our children in their tenderest age? This important question agi­
tates all parents in our present times more than ever, and principally those, where the mother is not able

to her child with her own milk.

It is therefore highly to be appreciated that many

contemporary medical friends having adopted our views,

try their best in their discourses either in writing or by

"Prove all things; hold fast to that which is good."

"Prove all things; hold fast to that which is good."
The Kneipp Water Cure Monthly.

THE MINERAL CONSTITUENTS OF MILK, AND ITS FOOD VALUE FOR THE METABOLIC ASSIMILATION IN THE SUCKLING BABY.

Much more fatal and pernicious than the vaccination of our small babies is the erroneous opinion which is propagated by the medical faculty, that the milk which is administered to babies instead of mother's milk should be thinned 3 or 4 parts with water. If you are not to be convinced by the high "Normal" death-rate of babies, caused by the acute i and chronic water-famine of many, many thousands of babies; look at the countless cases where babies have become chronic invalids and which have helped increase the income of doctors by always having some kind of ailment.

Now if this doctrine or advice as you may call it, would also be applied to the young of our domestic animals, they would all either die of hunger, or get a predisposition to paralysis, scrofula, tuberculosis and other lingering diseases. Now let us consider this warningly from a different point of vantage, namely the abstraction of the mineral constituents which are contained in milk, and which are the most important ingredients necessary to the structure of the human body, and without which the young human creature must wear away and perish miserably. We will now undertake an analyzing comparison between mother's milk and cows' milk in regards to the mineral constituents of each, and if we then compare the numbers of each, we obtain in a certain measure the greatness of the harm done by the officially sanctioned doctrine of thinning the milk of the cow before feeding the baby with it.

A mother, under normal circumstances, has milk containing 1.78% mineral matter, and nobody will presume to maintain, that any baby will run any danger to imitate itself with it, or to drink itself sick. Therefore a milk containing 1.78% of mineral "matter is not noxious to the health of the child."—On the other side we have analyzed the milk of several normal cows, and found it to contain from between 0.30 to 0.60% mineral matter! If therefore we want to let the child get the same amount of mineral matter as it receives from its mother's milk at 1.78%, then we should give the child at least 3 times as much cow's milk, that is in 24 hours about 3 to 4 quarts.

Now, according to the medical doctrines, we should thin this cow's milk 3 1/3 parts with water so as to get from 1 quart of goapl milk 4 quarts of thinned milk which would then contain only 0.15% of mineral matter.

What is the consequence? The thinning of the blood of the baby and its famishment of all mineral matter. If we want to give the child the same amount of nourishing mineral matter as is contained in mother's milk, we would have to give it 10 to 14 parts of milk, a day, then only would it be normally and mineraly satiated.

Supposed even that a child could in no case stand this great quantity of milk-water, and the therewith from ensuing inflammation of the urethra, what would become of the gastric juices of the child with such a watery diet? The child will be a complete Diabetic, in brain and nerves, in muscles and heart, in bones, blood and lymph; the great quantities of water that would be continuously brought into and through the system would soften all its tissues.

During my 26 years of experience I can assure you that in the whole district, because all the midwives and nurses were taught so by me, all the children that were born were brought up on unhinned (natural) cow's milk, and the grown-up young men from this part of the country were elected with preference into the regiments of the Imperial Guard.

Also that the death-rate of children was a very small one, and this surely should teach those anxious Specialists for certain children's diseases—betefly than to continue using thinned milk.

Ridiculous also is the contention, that a child's stomach is too weak to assimilate the unhinned cow's milk. Why don't they try, like I did, the correct theory.

If a fly, young or old, sits on the edge of a basin full of fresh pure cow's milk, she drinks her full of this milk, and flies away happy; one has never heard that the tender fly's stomach could not stand it.

The General Doctrine as taught in schools and colleges and is promulgated by wise professors, and midwives and doctors, must be combated.

Why does the state insist to propagate, their pernicious doctrine, i.e. of watering and thinning milk, before using it as food for the babies, into every home; thus causing a moral compulsion for the rich and poor.

The General Doctrine as taught in schools and colleges is propogated by wise professors, and midwives and doctors, must be combated.

Let the Light Shine.

It is a poor life that postpones everything heavenly until the final heaven is reached. It is a great accomplishment to fill this life with a heavenly atmosphere, to make many places heavenly as we pass along, to put a great deal of heaven's light into the lives of the people round about us.

RALPH WALDO TRINE.
The Advantages of Eating Raw Food.

After thirteen years of medical practice in hospitals and sanitariums, during which time I have watched thousands of experiments upon myself and many others with all kinds of foods, I find that natural raw food as a diet has many advantages, no matter from what standpoint it is viewed.

There are many advantages, but I will deal only with the following five. They are Physical, Mental and Spiritual Health, Economy and Liberty.

**Advantages Gained for the Physical Health by Eating Raw Food.**

Two and one-half years ago I was apparently an incurable invalid, suffering with nervous prostration to such an extent that not a single function was performed correctly. I could not sleep without drugs, no movement of the bowels without enemas, could not digest any article of food without discomfort and the aid of a stomach pump, often having to rise in the night and use the latter to wash away acid and mucus, vitality gone to such an extent that I could neither appropriate new food or cleanse my system of the old, fever and delirium wound up the case, and I found myself a wreck, mentally and physically. This was in spite of—yes, even caused by—the fact that I had been trying to live on well-cooked food. I say well-cooked food, because at the Sanitarium, of which I was President, we used the so-called hygienic cooking exclusively. You ask, how do I know that the cooked food was the cause of my trouble? Why? Because when discontinued the cooking, and used the food in its natural condition, I recovered vitality at once to perform each function, and all disorders left my body, and to-day I have an almost ideally healthy organism, my instincts being my guide and pleasure, and I have never enjoyed food so much in my life before.—Strong baby a year after.

**Advantages for the Mental Healing.**

As pain and sluggishness characterized my every bodily function, so irritability and melancholia characterized my mental attitude. Even while temporarily delighted with some object I grew sad, thinking of its transience. An erect attitude was impossible, physically or mentally; neither could I receive or give impressions correctly. I could see no reason in nature. An erect attitude was impossible, physically or mentally; neither could I receive or give impressions correctly. I could see no reason in nature.

**Advantages for the Spiritual Health.**

Great, indeed, have been the changes in my body and mind. So great have they been that whereas I used to be Materialist enough to think they were the principal part of me, I am now fully convinced that they are only the instrument for my spirit to manifest to others and to receive manifestations from others. I believe my spirit has existed for ages, but this is not provable to another; but it is provable that our spirit cannot make its instrument or body out of any material but living protoplasm taken as food. When our spirit departs these individual particles of protoplasm go back into their primal condition. I am trying to give my spirit the best materials to build its body out of, that it may manifest its Creator’s image, feeling sure that in doing so I will please both myself and others, and accomplish God’s will. I give thanks continuously to God that he has created perfect conditions, grieved that man, who, in endeavoring to improve them, is causing inharmony.

**Economical Advantages.**

At the time when I was paying $24.00 a month for food, and could not afford it or digest it, I left the boarding-house and lived on 33% cents (thirty-three and one-third) worth of wheat per month, and continued the diet until I had changed my financial condition. When I came to this city, over one year ago, to practice, I was practically unknown here and had not enough money to rent a nice apartment for even one month, so had to take a miserable dark one. To-day I have a nice bank account and live in a nice bright apartment. All of this would have been impossible had I eaten cooked food. No expense for coal, no trouble with cooks, no indigestion, and only one-third food required. Does it pay?

**Advantages for Liberty.**

There are many forms of slavery, none worse than slavery to one’s appetite, unless it be slavery to the opinion of others. When I finished my experiment of living on 9 oz of natural wheat per day, and found myself in excellent condition, I was liberated from many scientific superstitions. I will mention a few of them. “Man requires from two and one-half to three and one-half pounds of food every twenty-four hours.”

“Man requires meat.” “Man requires from 45 oz. to 60 oz. of water per day.” “If man eats raw food he will develop all kinds of germs and worms.” “Variety is necessary.” “Man must have extra salt.” “Man cannot digest natural salt because worthless fluids in the chemical laboratories fail to do so.” “That people at best could not be healthy long.” “That it is best to take a pill after each meal.” And last, but not least of these Scientific Health Superstitions, that “cooking improves the food.” And one more I had almost forgotten, and it is this: “Alcohol is a food.”

Reader, are you superstitious enough to believe all this?

Natural Food is one of the seven conditions of Life.

DR. JULIAN P. THOMAS,
No. 10 West 93rd St., New York City.

Plasmon.

When the great advantages of Plasmon become fully known it is quite evident that it will become a great favorite in the kitchen and household, as a regular adjunct to soups and sauces, jellies and other delicacies, on account of its convenience and economy. GERTRUDE OLDFIELD.
Cure during Pregnancy.

Mamaroneck may be reached in 45 Minutes by the N. Y. Central R. R.

Uterus, Dilatation of the Ligaments of the Womb, and Acute as well as Chronic Strengthemi

Tumors and Displacement

Cure, Just's Method, Dietetics, Electric Treatment, Healing Gymnastics,

The above are the most appropriate ways of treating the following acute and chronic diseases:

muscles controlling them.

rested by the release of the tension on the nerves and

stimulated and the eyes are

blood is

time the flow of fresh

two ebony cups, connected by rubber tubes with a mouth­

can in no way injure this delicate member. It consists of

minute vessels would be of great benefit. The sight

restorer used by Dr. Dinsdale in his treatment of the eye

achieved a success of which any one might well be proud.

Beyond this he

o

labored and waited, his confidence never wavering that in

the end he would be successful, would surmount all diffi­
culties and give mankind a means whereby the worst of all

human ills might be averted.

Recognizing the fact that failure in eyesight and in

hearing were both increasing at an alarming rate, Dr. Dins­
dale made diseases of the, eye and ear a special study, grad­
testating as an oculist and aurist and confining himself to

these specialties throughout the years of his practice has

achieved a success of which any one might well be proud.

His work has been along the lines of mechanical massage

treatment, in regard to the eye recognizing the fact that

absolute rest for a few moments at stated times during the

day and causing a fresh supply of blood to flow through

the minute vessels would be of great benefit. The sight

restorer used by Dr. Dinsdale in his treatment of the eye

is of very simple mechanism, cannot get out of order and

can in no way injure this delicate member. It consists of

two oblong cups, connected by rubber tubes with a mouth­

piece. By placing the cups over the eyelids drawn gently

away from the eyes. By retaining them thus for a short

time the flow of Fresh blood is stimulated and the eyes are

rested by it. The release of the tension on the nerves and

muscles controlling them.

Dr. Dinsdale makes the broad claim that his restorer

will cure all curable diseases of the eye. Beyond this he

does not go, but strenuously insists on being able to cure all

curable diseases.

And he is borne out in this statement by a multitude of witnesses who, having experienced the cure,

are thankful therefor and anxious for the world to know

of Dr. Dinsdale's great discovery. An that naught is equal to the efficacy of the Sight Restorer, of

definite and perfect success in all curable cases may very

properly be said in regard to its use. It operates on the same principle as the

Sight Restorer and is equally as great a boon to afflicted mankind.

Dr. Dinsdale sends a booklet on receipt of stamp to

those who are not able to call on him in person, preceding

the latter course when it is at all possible.

Our Sanatorium.

We beg to notify those of our readers who are inter­
ested in summer-resorts, where they could spend their vaca­
tion, that our Sanatorium "Bellevue" in Butler, N. J., is open to receive patients and visitors.

A full staff of attendants guarantees the comfort of invalids tending health-seekers, and the cuisine and management will give satisfaction to all visitors.

Light, sun and air baths, electric and massage treatment according to the newest Natural Healing methods, and steam-baths, all hot and cold water applications according to Kneipp, Pressnitz and our own improved methods are applied daily.

The Sanatorium with its surrounding cottages can contain a goodly number of patients, and visitors who intend to pass their summer vacation there, will only be too agreea­
bly surprised by the idyllic position of the Sanatorium and its romantic surroundings.

The terms are moderate and reductions are made to families or entire parties coming together.

Timely notice should be given the management of an intended visit, in order to secure rooms.

The aim of the Managers of the "Bellevue" Sanatorium is to satisfy every visitor, and to make a lasting impression on all those who have availed themselves of its hygienic and salutary conveniences.

Those who desire treatment in the city of New York, can receive same and all necessary information at our Nat­

ural Pathic Institute, 135 E. 88th St., New York.

In the life of every man there has been a day when the heavens opened of there own accord, and it is almost al­ways from that very instant that dates his true spiritual

personality. It is doubtless at that instant that are formed the invisible, eternal feature that we reveal, though we know it not, to angels and souls.

MAETERLINCK.

Sanitarium and Nature Cure Institute
Rockland Avenue, Mamaroneck, N. Y.

The following are the applications given to patients:

Cure, Just's Method, Dietetics, Electric Treatment, Healing Gymnastics, as well as Light, Air and Sun

Baths. The above are the most appropriate ways of treating the following acute and chronic diseases:

a) Diseases of the Nervous System: Neuralgia, Hypochondria, Nervous Headache, St. Vitus Dance, Sleeplessness, Nervous Dehilation, Diseases of the Brain and Spine. Paralysis, etc.;

b) Diseases of the Breathing Organs: Chronic Bronchitis and Catarrh of the Lungs, Chronic Pleurisy ai

its residences, Asthma, Emphysema and kindred conditions.

c) Diseases of the Digestive Organs: Bad Digestion, Constipation, Piles, Chronic Diarrhoea, Tumors of the Stomach, Dilatation of the Stomach, Nervous Dyspepsia,

d) Diseases of Metabolic Assimilation: Chlorosis, Obesity, Rachitis, Diabetes, Gout, Rheumatism, Sk

Diseases, Quicksilver Poisoning, Drug Poisoning, etc. etc.

e) Diseases of the Heart and Kidneys: Malconstructions of the Valves of the Heart, Nervous Heart Trouble

Bright's Disease, dropsy.

f) As also Special Climacteric Diseases and other Diseases of the Female Sex: Painful menstruation

Lencorbs, Chronic Inflammations, Diseases of the Ovaries, also Tumors and Displacement of the

Uterus, Dilatation of the Ligaments of the Womb, and Acute as well as Chronic Excitations, Purperal Fever. Strengthening

Care during Pregnancy.

Treatment during summer and winter. Prospectus free. For further information kindly address the proprietor,

G. PETRY, NATUROPATHIC PHYSICIAN, MAMARONECK, N. Y.

Mamaroneck may be reached in 45 Minutes by the N. Y. Central R. R.
C. P. D., Los Angeles, Cal. You are suffering from septicemia. Every day a cool steam bath. Put a kettle with boiling water underneath the seat. Bathe the neck and chest; allow the child to walk barefooted, also to the foot with a blanket so that no steam can escape. As perspiration begins, take a half bath or sitz bath, 75 degrees F., 10 min., combined with a sponge bath, of the whole body. After every one or two hours, going to bed a foot steam bath, or alternate foot bath, 5 min., 100 degrees F., one-half min. cold water, three times repeated. Every morning cold sponge bath of the whole body, three times weekly, combined with thigh gush. Make good use of going to the sea shore; let in the sun on the hot sand until very warm all over the body, then take a short ocean bath. Avoid meat and alcohol. Live on a vegetarian diet, especially plenty of fruits of all kinds, almonds, etc. Every day the juice of three to five oranges mixed with the juice of two or three lemons. If constipated, use injections.

W. B. & Co., Stockport, Ill. Q. Should or should not soap be used in taking the morning sponge bath? A. Soap should never be used except for special cleaning purposes; it deprives the skin of its oily nature.

Q. 2. Do you advise the drinking of hot water for cleansing stomach and bowels? A. All the applications and treatments in Naturopathy have to be given according to the individual condition of the patient. What is beneficial for one may not be for another. This is the reason why some are in favor of it, some against it. Certainly you may try it.

Q. 3. Are you able to give a fixed rule for (a) just what over-eating is and (b) what is proper and improper food? A. (a) Your own nature alone can give you a rule how far you have to go in eating. If you live on a raw food diet, you will find the limit easy; if you live on cooked food, especially on a meat diet, it will be more or less difficult, because the spices and irritating influences of such a diet will induce man to eat more than he needs. They also cause an artificial thirst. See article “Who is Right?” July, 1900. (C) Naturopathy recommends a proper food of a nutrifying, demulcifying fruit and vegetable diet. Read the famous book, “Fruit and Bread,” by Schlickeisen.

Q. 4. After going to bed in cold or cold weather my feet are nearly always cold. How should this be prevented? A. Chronic cold feet are a symptom of a false circulation of the blood, of a clogged system. Every evening before going to bed an alternate foot bath, three times weekly upper gush and three times knee or thigh gush, walking barefooted; during the night abdominal bandage, Lumbar bandage. If everybody had in the way as you did, it could answer the way as you suggest.

M. H., Boston, Mass. Consequences of appendicitis. In order to avoid another attack, your husband should use a hygrometer and take proper care of his health. Instead of three boiled eggs every morning, let him have grape meat, with lukewarm milk, melted with salt, strawberries, baked apples, stewed pears, oranges or any fruits he should like, with rolls or fruit. For the second half rice, macaroni or a few pasta- toes, with any vegetable, especially spinach, sprouts, carrots, peas, string beans, asparagus, etc. Vegetables must be steamed and flavored with a little whole wheat flour, tomatoes, parsnips, celery, onions, etc. Some vegetables you may cook in water, like asparagus, oyster plants, but use the water for soup, which gives a fine taste like chicken broth. Soups must always be thick. Use very little salt, no spices. Now and then he may eat a little chicken, turkey, lamb, mutton or fish, with asparagus or celery, baked apples, stewed pears, etc., prepared with lemon juice and olive oil. One cup of milk of cow or beef is necessary. No drinking during meals or directly afterward. Every morning cold half bath two to three minutes, combined with sponge bath, every night a wet abdominal hand- age; in case of pain on the region of the appendix, a thick extra compress of clay. [Potter’s clay mixed with water prepared to a thick salve.] If circumstances permit it, sun baths, especially on the abdomen. In conclusion, exconat of camomile tea.

Cure Monthly.

Mrs. J. C. D., Lebanon, Ill. For the child troubled with en- larged tonsils apply a wet neck bandage every night and every other night an abdominal bandage: twice a week a bed steam bath, after rising in the morning a cold sponge bath, especially on the abdomen. Use one bath in the evening and another a bath in the morning, then use a cool sponge bath of the whole body, lukewarm milk tea. After every bath, use a cool sponge bath of the whole body.

W. A. H., Fall River.—Hayfever. This is a catarrh of the bronchial tubes, the nose and eyes, and attacks mostly people who eat and drink too richly and too much. A very simple vegetarian diet is the first “conditio sine qua non.” Avoid alcohol in any form, strong coffee, tea, spices. Begin right away with bed steam bath every other day, 1 hour direc- tion with cool half or sitz bath 10 minutes to follow. In­ stead of a bed steam bath you can take a sun bath which is more powerful. Every morning cold sponge bath with alternating thigh gush and upper gush. Gargle several times daily with lemon water. Every morning and after­ noon breathing exercises in fresh air for about 3 minutes; inhale slowly through the nostrils, retain the breath in the lungs or a few seconds and exhale slowly through the nos­ trils. In conclusion, daily enema with lukewarm peppermint- flavored milk. Sleep with open windows. During an attack, also alternate foot bath.

The pimples on the back and neck are an effect of nature to purify your body of foreign matter, which is the cause of your hay fever. They will disappear after some steam packs.

J. F. H., Chicopee Falls, Mass.—You are run down and you cannot digest any food. Avoid meat, eat on a very simple and light food diet, do not eat much at a time, but often. Breakfast: 1 cup of Dr. Lahmann’s Cocoa with 1% milk, 200 grams of a toasted bread, a few strawberries or an orange or baked apples or raw tomatoes and lettuce. Dinner: Rice with raw tomatoes or baked apples or lettuce or stewed prunes, prunes, etc. Fruits of all kinds with whole wheat bread. Support with lukewarm milk soup with whole wheat bread. The juice of one lemon flavored with white egg, fruits and berries. Avoid sugar, meat, spices, vinegar, coffee, tea, alcohol; save very little salt, better use to crush juniper berries, gentian and fennel. 1 teaspoon of tea, may add some. Every morning, every evening, sponge bath twice, two hours bed steam bath with extra compress on the stomach. 1½ hour hereafter, sitz bath, 80-85 F., 15 min., 3 times weekly. Two hours’ steam bath, 80-85 F., 15 min. every night. 60-75 degrees F., 1 hour. On the fourth or fifth day, an oak bark sitz bath, 10 de­ grees F., 20 minutes. The oak bark has to soak in water twelve hours, then cook it forty or fifty minutes. (Mix sauces to one bath.) Cool enema every day about one pint. Between the meals every other day one cool sitz bath, 70 to 85 degrees F., three to five minutes. During the night abdominal band­ age. Moderate riding of bicycle.

LUDWIG STADEN.

To Whom It May Concern.

Patients who desire advice by mail have to send $2 in advance for first letter, $1 for any additional advice. Other­wise no answer in future.
Do you know that?

If you are weak you can be made strong.
If you are fat you can easily train down to graceful proportions.
If you are thin you can develop your muscles and thus accumulate additional fatty tissue.
Many chronic complaints can be permanently cured by physical training.

Strength, health, manly and womanly beauty and vigour—the very foundation upon which are built all happiness and success, and all that makes life productive of glorious results—is attainable for all.

No woman who cares for bright eyes, for a fine, clear complexion, for the grace and suppleness that accompany a high degree of physical health, can afford to be without physical training.

McFADDEN'S SYSTEM
OF PHYSICAL TRAINING.

A complete hand book 128 magnificently illustrated pages, containing 50 half-tone photographs. Chapters on every subject relating to health and strength.

Contents of Instruction Book.
Nine Classical Poses of Prof. Bernard McFadden.

Special Instruction for Treating Diseased Conditions.

Digestive Disorders—Weak Lungs, General Debility Deformities, Backache, Rheumatism.

This great work, the best ever published on physical training is sold with the Exercisers and can be obtained in no other way.

Also a large Stock of other Exercisers, as Prof. D. L. Dowd's, Whiteley, Harvard, Kollers, Muscle Beaters, Flesh Brushes, Rubbing Towels, Ventilation Shoes and Hosiery, and other Gymnasium and Health-Culture Supplies. Catalogues and Circulars.

Adress all Orders to the KNIPP-STORE, 111 East 59th St., New York.
 Ordinarily we associate the word "intemperance" with excessive and abusive use of alcoholic beverages, rarely, if ever, including the vices and evils of intemperance to other causes. There are, however, other forms of intemperance quite as pernicious and detrimental to the general well-being, and not less so to individual health than the use of alcoholic beverages, which are not more prevalent, but which, as in the case of their abuse, are the cause of much suffering and death—coffee. The circulatory system becomes in its turn a patient, and mankind in general, in again forcibly reminding his public health of the beneficent services which coffee has rendered the medical profession in particular, and mankind in general, in again forcibly reminding his mothers who have the welfare of their children at heart, and urging physicians to bring this to the notice of their patients as a cause of much suffering and death.

Aubert is convinced that the action of the heart is decreased in coffee-drinking, it is important that a habit, which in moderation is in fact a white crystalline mass, and which is so virulent a poison that it is given as an antitode to counteract the action of morphine in opium poisoning. The symptoms of coffee poisoning can with difficulty be distinguished from those of alcoholism, so that alcohol (that universal scapegoat which has so many sins of its own to bear) is very often burdened with the additional sins and evils of tea and coffee. Who would for a moment believe in coffee reducing a victim to a condition of delirium tremens, that condition of complete prostration usually attributed to alcohol only? Yet that condition is produced by coffee quite as frequently as by alcohol.

Its excessive use, or its use by those unfortunately sensitive to it, produces wakefulness, nervousness, confusion and incoherence, amnesia, delirium and agitation of the heart, and dyspeptic disorders.—"Prof. Wm. F. Rollins.

And as an article of diet coffee unduly stimulates the nervous system, and when used excessively produces tremors. Aubert is convinced that the action of the heart is decreased in thirty minutes by the application of very weak solutions to their surface. Hypodermic injections of 0.2 grammes proved fatal to a pigeon in eight minutes from the effects of caffeine, and 0.5 grammes killed a cat in sixty minutes. In a case of marked tremor of the muscles of both extremities, and the nerves of the inner lining of the stomach by the caffeine contained in the coffee. This very rapidly develops into chronic dyspepsia, general debility, and finally complete and chronic stomachic dyspepsia. Hence the statement that coffee-drinking, which is a white crystalline mass, and which is so virulent a poison that it is given as an antitode to counteract the action of morphine in opium poisoning. The symptoms of coffee poisoning can with difficulty be distinguished from those of alcoholism, so that alcohol (that universal scapegoat which has so many sins of its own to bear) is very often burdened with the additional sins and evils of tea and coffee. Who would for a moment believe in coffee reducing a victim to a condition of delirium tremens, that condition of complete prostration usually attributed to alcohol only? Yet that condition is produced by coffee quite as frequently as by alcohol.

The above mentioned symptoms are not persistent, the suppression of the coffee suffering to bring about their prompt disappearance. It would seem that elimination was in this case followed by improvement more quickly in one instance than in the other.

"The immoderate use of coffee by children has in many instances determined an arrest of development, and its immoderate use is responsible for many digestive and nervous troubles, the origin of which is vainly sought by the puzzled family and attending physician.

A great genius of our day, a philosopher as well as physician, PROFESSOR VIRCHOW of Berlin, expresses himself on coffee in the following terms: "We have at last arrived at the truth that coffee is nothing more or less than a strong stimulant, and taken in large quantities, a poison.

Dr. WILL ALCOTT, in his pamphlet, "Effects of Tea and Coffee," says: "That coffee is really essentially a medicine—narcotic—no medical man of to-day will doubt, not even a one who has paid the least attention to its effects on the human system.

In this view of the question, coffee should be strictly regulated.

Just as alcoholism owes its origin to the use of two qualities of alcoholic beverages, so coffee-drinking owes its origin to the excessive use of large quantities of coffee. Pathologically, the symptoms of the above forms of disease are similar—extreme nervousness, great excitability, insomnia (or if sleep does come it is painfully disturbed by terrifying dreams), absolute inability to properly digest and assimilate food, and often inability to retain food on the stomach owing to the excitability of the nerves of the inner lining of the stomach by the caffeine contained in the coffee. This very rapidly develops into chronic dyspepsia, general debility, and finally complete and chronic stomachic dyspepsia. Hence the statement that coffee-drinking, which is a white crystalline mass, and which is so virulent a poison that it is given as an antitode to counteract the action of morphine in opium poisoning. The symptoms of coffee poisoning can with difficulty be distinguished from those of alcoholism, so that alcohol (that universal scapegoat which has so many sins of its own to bear) is very often burdened with the additional sins and evils of tea and coffee. Following evidence concerning coffee:

Dr. Trottier expresses himself in these words: "Diseases that are cured by the use of coffee are analogous to them, as tea and other narcotics.

Dr. Burdell of New York says: "I have found headache among these people only who drink coffee or tea, and no other cure was successful where the patient did not give up entirely the use of these beverages.

Dr. Fares writes: "Coffee is suspected, and not without reason, to produce paralysis.

Dr. Tonelle, an eminent writer on health subjects, says concerning coffee: "Coffee accelerates the shortening for a time of the period of their activity only by the deformity following thereon.

Mr. Timbuldti, an Italian medical journalist, says amongst many other things about coffee: "It causes debility, changes the gastric juice, disturbs digestion, and very often produces paralysis and distress.

The experiments which the French author Leven has made, go to prove that far from accelerating digestion, coffee, rather retards it totally. He says: "If we give a dog 50 grammes of coffee diluted in 150 grammes of water, and kill the animal five hours afterwards, we find the stomach palid, the mucous lining bloodless, and the vessels of the outer skin contracted, the whole organ showing appearances of extraordinary want of blood. Coffee and tea taken in excess often produce dyspepsia (digestion), an account of the continued want of blood in the mucous membrane, and finally a permanent state of convulsion is established.

Concerning the injurious effects of coffee Dr. Alcott writes: "Next to children, women suffer the most through the use of this narcotic drink; that is especially true of women; those of whom our present time and country possess to many. Amongst them we find above all an inclination to hysterics, scrofula, or consumption.

Professor Brilliant Savarin, of Paris, says in his work, "Phy siology of the Sense of Taste": "Coffee is a much stronger poison than people usually suppose. A strong man can live long and drink two bottles of wine a day. The man who could not stand the same quantity of coffee for any length of time; he would become an imbecile, or would die of consumption. I have seen in Leicester Square, in London, a man who had been made a cripple by excessive use of coffee.

"Every reader and every mother in the whole world," so Savarin concludes, "must imperatively forbid their children the use of coffee, if they do not wish to have sickly, underde veloped children, who are already old when they have reached the age of maturity.

A well-known medical authority says: "Undoubtedly the early and excessive use of strong coffee and tea is the early predisposition for the taste of alcoholic beverages in after life, and many a drunkard laid the foundation for his unfortunate state in early life through the use of tea and coffee.

Rev. Kneipp, says about common coffee in his famous book, "Thus Thou Shalt Live" on page 78: "The coffee plant is a poisonous plant, consequently the fruit is poisonous. To prove this we need only to point to the fact that caffeine, one of the most powerful poisons, is the constituent of the common coffee fruit. A very small quantity of this caffeine is sufficient to kill a person. As coffee is a stimulant, it is an extremely strong nerve-stimulating agent when used frequently. A person indulging in frequent daily drinking is doing to his body what a liquor drinker does. It is almost incredible how the constant use of these stimulants irritates the whole nervous system and in many cases affects also the mental powers."

KNEIPP HALT COFFEE.

It is a well-known fact that the unroasted coffee-bean is devoid of all aromatic qualities and principle, and that the agreeably aromatic and pleasant taste and odor of coffee, which gives to it its great value as a beverage, is developed during and the process of roasting. This aromatic principle which is of the nature of a volatile substance, has been called caffeine, and must not be confused with the poisonous coffee principle which is known as caffeine.

It is also a well-known and established fact, known to medical men and chemists for a long time, that other parts of the coffee-plant possess the properties of the bean to quite a const* erable extent. This is especially true of the young leaves and the pericarp. Just as mace, which is the pericarp of the bean, possesses the agreeably aromatic properties of the bean...
By a peculiar and valuable process, which has been patented in almost every civilized country of the world by its patentees and owners, "The Kathreiner Malzkaffee-Fabriken of Munich, Bavaria," a savor is prepared from the coffee-plant which contains only the agreeably aromatic volatile principle, the coffee sapor, and in no way injurious to health.

This savor is made on the Island of Bourbon, off the coast of Madagascar, where some of the choicest grades of coffee are grown.

Malt is especially used in medicine in connection with coffee, and in the manufacture of this highly estimable beverage, the generally agreeable aromatic odor and taste of coffee is developed within the malt kernel just as it would be consumed by a human being. The Kneipp Malt Coffee is then coated with an imperious but absolutely harmless coating made from the cocoa-bean, thus insuring an absolute retention of the aromatic coffee principle by which it has been impregnated.

During the process of the roasting absolute regard for the temperature is observed, so as not to destroy the valuable nutritive properties of the malt, which are still retained, as the following analysis of Willimer will show:

Conclusively showing the great similarity in chemical composition of the albumen (white of egg) contained in the food product made from the choicest grades of barley malt, and in addition thereto nearly 10 per cent, of Starch and Dextrine (both 64 mel, besides nearly 10 per cent of Maltose and Caramel) and universally known, and we need not call attention to them here. However, it may be of interest to know the comparative composition of the albumen of the egg with the albumen of the system. In Kneipp Malt Coffee, therefore, 44 per cent, of extractive matter): with the delicious taste and aroma of coffee without, however, possessing the injurious and harmful caffeine, which causes thousands to suffer who injudiciously drink coffee in large quantities.

At the Eleventh International Medical Congress, held at Rome in April of 1894, the Kneipp Malt Coffee enjoyed the distinction of having been made the subject of a lecture before the congress, by Guiseppe Steffanacci, which appeared in // Policlinico, Rome, April, 1894. Also of a dissertation by the well-known Dr. Carl Gerster, which was also read at this Congress. The Kneipp Malt Coffee received the unqualified sanction and approval of many of the ten thousand physicians who attended this Congress.

Upon the advice of Father Kneipp, His Holiness, the Pope, introduced the Malt Coffee into his household at the Vatican, and to show his appreciation of the labors of Father Kneipp, conferred upon him the title of Doctor honoris causa.

Rev. Kneipp says about the Malt-Coffee. "Luckilly there are a good many people who abstain totally so as to rule from drinks injurious to health and who supply themselves with nourishing and harmless beverage."
Dr. Walser's Rippenkrepp Underwear

**With Two Layers.**

Manufactured exclusively by Oarl Mez & Söhne in Freiburg (Baden, Germany).

(Patented in Germany and America.)

Several Medals awarded at Hygienic Expositions.

Dr. Walter's RIPPENKREPP HEALTH UNDERWEAR made of the best Maco with China-grass ribs is the cheapest and most practical for adherents of the Kneipp and Natural Healing Methods. The Rippenkrepp Health-Underwear holds a great deal of air, offers the best protection for colds, does not lose its porosity, does not shrink in the wash, only the linen-threads come in contact with the skin, at the same time being much more durable than the real linen.

Three years ago we introduced for sale as a novelty 1 Kettenkrepp Health-Underwear in Raw Silk, and Dr. med. Walser's China Grass Health Underwear made of Kettenkrepp and air-cell, and this kind of underwear sold quickly.

To-day we are in a position to offer to our customers a piece of underwear, i.e., our new Krepp Health-Shirt in two layers, made of the best Maco cotton with ribs of silk or China-grass, which excels all systems known heretofore (Jaeger, Lahmann, Thomala, Deimel etc.), being more practical in hygienic respect, more comfortable and cheaper than those.

Years ago we proved that our Kettenkrepp is better adapted for underwear—because it is more porous—than tricot, flannel, etc.

In the mean-time we have succeeded in providing this Krepp-texture with ribs, which are intended to extend the warming air-stratum between the skin and the underwear, and to reduce surfaces of contact of the body and the shirt to a minimum, thus forming a pretty large stratum of air, which keeps warm in winter and cool in summer. According to the experiments made thus far our woolen Rippenkrepp-shirt keeps the body even warmer than woolen flannel or woolen tricot.

To those who used to wear wool or silk on the skin we also furnish the Krepp with wool- or silk-ribs, such underwear will not lose its porosity or shrink by usage or in the wash. The adherents of Kneipp- and Natural Healing systems certainly will feel very comfortable in our Maco-Krepp-textile with China-grass (China-linen) ribs.

This China-grass-rib-underwear is preferable to the pure linen underwear on account of it being lighter, cheaper and more durable. Pure linen is only adapted for body-linen, if the texture is coarse, otherwise the skirt has too much contact with the skin and will cause colds, because there is no stratum of air to regulate the heat. Linen shirts of a coarse texture weigh twice as much, as those of a fine texture and, therefore, tire those wearing them. The Chinese who are ahead of us in the art of dressing, avoid heavy clothes and rather wear two light ones than a heavy one, because these better correspond to the temperature of the day, and thus the clothing never is too cold and never too warm.

For tourists and friends of sport there is no better skin-apparel than our Rippenkrepp, because the ribs keep the surface of the shirt from the body and if the shirt has become damp from perspiration, one is less liable to take cold.

The Rippenkrepp is cleaned in the same manner as any other clothes, i.e., with good ivory-soap, avoiding soda, chlorine and such things.

**Prices for Dr. Walser's Rippenkrepp Health-Underwear,**

WHOLESALE AND RETAIL. A complete catalogue and samples will be furnished on application.
MGR. KNEIPP’S TEAS AND REMEDIES

Their Effects and Use.

How to Prepare the Teas, Tinctures and Wines.

To make a cup of tea pour 1½ cupful of boiling water over 1 tablespoonful of flowers or leaves, let boil for 5 or 10 minutes, then sift and drink when cool. Roots, bark or berries should be put in cold water, and after they have boiled for 5—10 minutes let draw for 5—10 minutes. A tablespoonful of honey or some sugar may be added. As a rule take 3 cups a day. Of Arnica Tea only a teaspoonful should be taken each day.

Some people prefer to take these remedies in the form of powder. A small teaspoonful 3 times a day is the usual dose. Of the tinctures take a teaspoonful in water, or on sugar, or with some honey, three times daily.

To make the tinctures mix 1 lb. of herbs with 1 pint of rye-whiskey or 70% pure spirits, let draw for a week and pour off.

Some herbs: Wormwood, Rosemary and bark of Black-Alder, are best if prepared with white wine (Spanish Sherry preferred). 1 lb. of herbs should remain in a quart of wine for at least a week, then sift and use a tablespoonful three times a day.

Be careful to buy these remedies from a good, reliable firm. Some herbs will lose all their curative properties if they are not collected at the proper season, dried in the proper way, or kept in stock too long.

We keep a careful selected stock of best imported herbs, free from admixture of foreign substances.

REMEMBER: “Health is the greatest and best gift.”

MOTTO: “Innervate universa germanantia In terra Domino.”

“Let every herb of the earth praise the Lord!”

Bark of Oak.

German: Eichenrinde.—French: Chene.

Latin: Quercus robur L.

Tea of it will strengthen the interior organs. It is very valuable for healing piles, fistula, prolapses of the rectum; also for swollen glands, or swollen throat.

Pound 30c, box 15c.

Bearberry Leaves.

German: Barentrauben-Blatter.—French: Bousserole.

Latin: Arbutus uva-ursi.

Leaves of the bearberry tree make a very wholesome tea. But it should be well boiled, so as to reduce the quantity of the water to about one-half. It is to be taken for slight troubles, chronic catarrh of the bladder, dilatation of the bladder, for stone and gravel, catarrhal conditions, etc. To obtain good results it should be used for a considerable time.

Pound 40c, box 15c.

Bilberries.

German: Heidelbeere.—French: Myrtille.

Latin: Vaccinium Myrtillus L.

Wonderfully effective in cases of diarrhoea. Chew and swallow the dried berries or prepare some bilberry spirit.

Pound 75c, box 20c.

Bilberry Leaves.

German: Heidelbeere-Blatter.—French: Myrtille.

Latin: Vaccinium Myrtillus.

Tea of bilberry leaves has become deservedly popular for its excellent results in diabetes.

Pound 40c, box 15c.

Birch Tree Leaves.

German: Birke.—Latin: Betula alba.

Tea of the leaves of the birch tree used internally for rheumatism, gout, dropsy, urinary complaints, etc., externally for eruptions of the skin. The juice of the birch tree is a valuable blood purifier, for skin diseases, and an excellent blood purifier.

Pound $1.00, box 20c.

A PATIENT'S STRENGTH

Medicine Does Not Always Sustain It.

Food, Food, Food
is what is required, but in concentrated
Form.

Brains! was the reply a prominent painter once
made when asked what he mixed his colors.

Brains! would be the reply of any modern phy­sician if asked what he gave to effect his marvelous
cures. There would be as much truth as terseness in
the answer.

The same remedy is not always given for the same
disease, in these times. Circumstances, the age of the
patient, and surrounding conditions generally, are con­sidered.

The first thing our advanced doctor attends to is
the strength of the patient. That must be maintained
at all hazards. Medicine can no more be carried to a
diseased part, when the blood hardly circulates on ac­count of weakness, than a boat can be sailed on a
river whose channel has run dry.

New Blood Must Be Hade.

New flesh tissue must be built. New strength
must be found, and all this with the least exertion on
the part of the patient.

In such emergencies, beef tea, beef extracts, jel­
lies, and other so-called invalid foods have been given,
but they were not satisfactory. Too much of the life­sustaining qualities had passed off in the cooking.

Such facts as these led to the discovery of BOVIN­INE— the greatest and most concentrated Beef Juice
ever produced. It is used and commended by physi­cians the world over. In thousands of cases has it
fanned the smouldering embers of life again into a
blaze, and arrested the progress of some wasting dis­ease.

For infants, the aged, convalescents, the over­worked, or sick, it is a boon beyond price. No family
can afford to omit BOVININE from the medicine
chest. Though it is not a medicine, it is preventive of
those ills for which medicine is given.

MEN 3 E WOMEN

“ar the only ones we expect to interest in Good Health Clinic, but we have yet to find a woman who will give it up. Why

BECAUSE it is the cheapest Journal of the kind in the world
BECAUSE for 600 we offer new subscribers $1.00 worth.
BECAUSE the one idea of The Clinic is to keep its readers well
BECAUSE we do not try to sell you some sure cure medicine-
BECAUSE we show how nine-tenths of all diseases may be
BECAUSE we really sell the secrets of health, strength and
BECAUSE the first number may be worth many times the
glease for a year.
BECAUSE it is a duty you owe to yourself, to your family and
to the State to keep well if you are so, and to get
well if you are ill.

See what fifty cents will do. To bring in an extra 10,000
new subscribers we shall present each one sending us fifty cents with a SOLID SILVER AND PEARL PAPER KNIFE. This is a free present, in addition to giving your subscription free. The knife is a beauty, and will make a lovely present, and is worth entirely free. All you need to do is to send so one-cent stamps to

HYPNOTISM EXPLAINED

By Rev. L. F. Schlathoelter.

This is a practical book, teaching you how to use the
Suggestion Method in curing diseases. The profession of
regular physicians has come to recognize the great influence
and power of Suggestion as a Therapeutic Agent. Its influ­
ence in everyday life is so great, that no one should be with­
out the knowledge of how to use it. Hypnotism explained
shows you how you may hypnotize successfully in relieving
sick people. "Hypnotism explained teaches you how you may hypnotize successfully in relieving the sick," says "The Medical Brief."

Send 60c. in Stamps or Money Order to this office, and
we will mail you postpaid this unique and eminently practical
book, bound in cloth (in German same price). To many pa­
tients it is worth its weight in gold.

KNEIPP MAGAZINES PUBLISHING CO., 111 E. 59th St., N. Y.

By eating muscle-building food—that’s the way. Nuts contain
more Nitrogen (which makes muscle) than meat: Peanuts much
more than chicken, and the Nitrogen in almonds can be absorbed
and used. Peanuts, almonds, and pecans are very nutritious;
they have these elements in a condense form, easy to digest.

THE PANAHA CANAL.

THE INTERNATIONAL COPPER CO.

In which a number of well-known New York business men, among whom may be named Wm. R. Townsend, Arthur F. Carmody, Wm. H. Martin, Roswell Q. Stebbins, Walter C. Richards, R. H. Reddish, Henry A. Whiting, W. H. Hendee, Cassius M. Gilbert, and James C. Bright, are interested, controls nineteen rich copper concessions of about 107 acres each, making something over a hundred ordinary mining claims, together with timber, coal, and limestone properties and water rights and water powers there.

Of these concessions the Consul General of Colombia at New York says:

"I do know that in the districts where they are located copper is found in very great abundance, and I have no doubt myself that these mining concessions will prove very rich in that metal upon being properly equipped and worked.

Colombia is a great mineral storehouse, which heretofore has been third in the production of gold and a very large producer of silver, but in the struggle for these precious metals the vast copper deposits have remained undeveloped. I am glad, as I know every Colombian will be, to see American and English capital now seeking these rich fields, for I am sure that investments could not be made anywhere with prospects for greater and more certain returns to capital than in the above region. Which I believe will quickly develop into one of the greatest copper producing fields in the world."

Shares are now only One Dollar each, and those who obtain particulars in time will get Two Shares for every One Dollar subscribed.

An interesting Prospectus containing Maps, Views and full information will be mailed you upon request. Write us at once.

Return To Nature

The Book of the Century.

This work is recommended to every invalid, patient, sick person, and everybody interested in the Natural Methods of Healing.

It contains the only true natural system of treating ALL diseases of the nerves, lungs, stomach, throat, skin and sexual organs; also gout, rheumatism, diabetes, etc., etc., and gives you not only a speedy relief—but a sure Cure in all cases.

Be Your Own Doctor, No drugs or medicines used or recommended.

Only the natural methods: Light, Air, Water and Diet Treatment are used. Let no one despair but procure this work, which will bring him full relief and a complete cure.

Hypnotism and Osteopathy

# FREE TO ALL.

De. P. L. Matthay, the well-known Osteopath has written a work on Osteopathy which has been called, by many "Osteopathy in a Nutshell." This work is being advertised extensively as a Flail Course in Osteopathy. It is so complete, yet so simple, that anyone can learn the manipulations taught and successfully overcome the troubles for which Osteopathy is recommended. This is just the book for the busy man. No long, tedious details to wade through. It is illustrated and tells exactly what to do to obtain results.

THIS BOOK WILL BE MAILED FREE

To anyone sending in $1.00, for a year's subscription to

The Hypnotic Magazine

Entitled Suggestion. This monthly magazine is devoted to the study and advancement of suggestive Therapeutics and Hypnotism, and to the investigation of all occult phenomena. It is edited by Herbert A. Parkyn, M. D., principal and founder of The Chicago School of Psychology. Every issue contains articles from the pens of the leaders in the investigation of occult phenomena and Suggestive Therapeutics.

"Osteopathy in a Nutshell," Both

"The Hypnotic Magazine," 1 year, j p., $1.00

(Entitled Suggestion)

We Offer is for This Month Only.

Gluten Foods.
GLUTEN, THE LEAN MEAT
OF THE VEGETABLE KINGDOM.

Plain Gluten Flour.

Used same as other Flour in making bread, and other articles of diet. Make your own Gluten Bread. Has its own nutty, gluten flavor. Very satisfying and highly nutritious. The cheapest and best kind of a baby food.

Price, 15 cents per package.

Self-Raising Gluten Flour.

Makes the most delicate and delicious griddle cakes ever made. They fairly melt in the mouth. Non-fermenting, unlike other pancake Flours. Muffins and cakes are excellent. Digest quickly and easily in the stomach.

Price, 15 cents per package.

Gluten Breakfast Cereal.

Has a delicious and satisfying flavor. Is strengthening and not fattening. A dish of this has more nutriment than a good beefsteak, and has none of the bad qualities of animal meat.

Price, 20 cents per package.

Gluten Crackers.

Are made of Gluten Flour and a little butter. An all-natural food for lunchrooms. Children love them.

Price, 20 cents per package.

Gluten Bread.

Made from the gluten gum direct. The leaves are rich in nutriment, and are very attractive. The weakest stomach can digest it. One loaf has as much protein, the strength-giving element, as five loaves of bread made from white flour.

Price, 15 and 10 cents per loaf. Five cents additional for delivery of single loaf in Greater New York.

Gluten Macaroni.

Is a new addition to this line, and much appreciated. Combined with tomatoes or cheese, and properly prepared, is most delicious and highly nourishing.

Price, 20 cents per package.

The First genuine Gluten ever placed on the market in this country.

In considering prices, remember that goods are scientifically classified with lean meats, not with the cereals and flour, which contain mostly starch.

Gluten Breakfast Cereal.

Five pound sack... Ten pound sack...

Plain and Self-Raising Flour.

Five pound sack... Twenty-five pound sack...

THE DR. C. O. SAHLER SANITARIUM,
61 WALL STREET, - - KINGSTON, N. Y.
MGR. KNEIPP'S TEAS AND REMEDIES

Black Alder Bark.

German: Erlebastluehne.—French: Quina.
Latin: Rhhamnus frangula.

Tea made of the bark is a diuretic and laxative. It is a good remedy for colics and cramps, strong congestions, etc.
Pound 75c, box 15c.

Blackthorn Blossoms.

German: Stachelbeerbluete.—French: Prunus spinosa.

A very good remedy for whooping-cough and catarrhs in the chest. The juice of the herb boiled in the sugar is used for the same purpose.
Pound 40c, box 15c.

Borage.

German: Borretsch.—Latin: Boraginaceae.

A good remedy against heart-burn. Pound 50c, box 20c.

Bramble (Blackberry).

German: Brombeer.—French: Ronce noire.
Latin: Rubus fruticosus.

Tea made of Bramble Leaves purifies the blood. It is a purgative as well as a strengthening remedy.
Pound 40c, box 15c.

Brier (Hips).

German: Hagebutten.—French: Gratte-cul.
Latin: Rosa canina.

Tea made of Brier Berries is a good remedy for catarrhs of the chest. The juice of the herb boiled in sugar is used for the same purpose.
Pound 40c, box 15c.

Buckthorn Bark.

German: Kreuzdorn-Rinde und Beeren.
French: Nervurer purgatif.
Latin: Rhamnus cathartica.

Tea made of the Buckthorn Bark or the dried berries, or the leaves of the fresh berries, boiled in sugar, is an excellent purgative. Adults take 1 to 2 tablespoonful, children 1 teaspoonful of the sweetened juice.
Pound 50c, box 20c.

Buckthorn Berries.

German: Klettenwurzel.—French: Bardane.
Latin: Arctium lappa.

Tea of Buck-Bean operates well on digestion and prepares the stomach for ordinary tea.
Pound 50c, box 15c.

Burdock Roots.

German: Heringswurzel.—French: Bardane.
Latin: Arctium lappa.

Burdock Roots promote the secretion of the urine. Besides various preparations for promoting the growth of the hair made from them, they are used for colds, especially for colds in the chest and lungs, and for flatulency and unwholesome gases in the stomach, weak stomach, or cold in the stomach, and inactivity of the kidneys. For nausea, fainting fits and many stomach troubles, tincture of Calamus root is highly recommended.
Pound 50c, box 20c.

Dental Plates Lined With Gold.

The Greatest Invention Ever made in Dentistry.

Dr. John A. Daly, a prominent dentist of Washington, D. C, has invented and patented a process by which dental plates can be lined with pure gold, which is directly incorporated into the plate, and which lasts permanently.

The only system by which an exact impression of the mouth can be taken.

THE DENTAL PLATE as commonly worn is often the unsuspected cause of disordered Ingestion, stomach troubles, chronic sore throat, neuralgia, etc. WHY? BECAUSE OF ITS UNEFFECTIVENESS. The ordinary dental plate, no matter how well, or by whom made, is porous, and soon becomes saturated with secretions of the mouth, the latter decomposed in the pores of the plate, and putrefaction sets in. No amount of cleaning can prevent this result, all this your physician will promptly confirm.

Our Gold Lined System is a Guarantee Against Such Evils.

The plate to which our gold lining is applied is hygienically perfect and the cost of the gold lined plate is no more than the average dentist charges for the ordinary or unlined.

Dental plates now in use can be lined with gold and made to fit perfectly and comfortably in the mouth, at a nominal cost.

This is not to be Confounded with Anything yet Known in Dentistry, and we are the sole owners. If you value health and cleanliness, have your plate lined with gold, and write living at a distance can send their old plate by mail, and in two hours after received at our office, they are completed.

Daly Gold Lining Dental Office

St. James Building, 26th St. and Broadway, New York City.

OFFICE HOURS: 9 A.M. to 6.30 P.M.
OKIE'S WORISHOFEN TORMENTIL SOAP

is according to the assertion of physicians, chemists and laymen the best soap of the day. It does not only purify the skin but has also medicinal virtues and is most effective for any kind of scales, chapped skin, freckles, scale and dandruff used with cold or tepid water. It makes the skin soft and tender and is very economical. Each cake bears the trade-mark "Okie." Beware of Imitations. For sale at all first-class Kneipp Stores. Price, 20c. a cake, postpaid, direct from Depot: KNEIPP-STORE, 111 East 59th Street, New York.

SOME TESTIMONIALS.

In respect to cosmetics and hygiene, Okie's Tormentil Soap is one of the best preparations. It makes the skin soft and flexible and protects it from cracks and chills. A few ablutions with this soap will cure such cracked hands. It has also proven salutary for herpetic eruptions of the skin. This soap cleans the pores thoroughly consequently it's use prepossesses in a far higher degree than other soaps.

St. Katharinenbad, June 16th, 1895.

Chief-Physician of the Kneipp Water Cure Institute, St. Katharinenbad, Bohemia.

Okie's Worishofen Tormentil Soap has given such excellent satisfaction, that I think it my duty to tell you all I know about it.

For a rough cracked skin its services are indeed excellent. After this soap was used for a short time only, I have seen starting cases of scurvy, even of invariable liver-spots and freckles which had been treated with all remedies. When using this soap dandruff fades away very quick, especially with little children.

We also use this soap for gnat- or mosquito-bites which we cover with a lather. This we allow to dry on the skin and in a short time the pain is gone. The public opinion is very much in favor of Tormentil Soap. It is used more and more after the first trial, for as a toilet soap it has no superior and in consequence of its productive and economical wear and tear it is the cheapest soap at the same time.

EAST.

Wagner's Oquid Shampoo

makes an exquisitely soft rich lather of remarkable cleansing and healing properties. Allays itching, heat and irritations.

The hair may be washed as often as every other day, as this is particularly necessary in large cities and towns, what much smoke and dust is encountered. It will not injure the colour of the hair and leaves it very soft, so that as it should be, it will be found necessary to do as directed.

To keep the hair and scalp in a healthful condition, shampoo once or twice a week.

For dandruff or falling hair shampoo the head every other night, rubbing the liquid well into the scalp for a few moments then wash it out thoroughly with warm water, afterwards on a douch of cold water.

For a shampoo take from one to two tablespoonful of the liquid or more, according to the thickness of the hair, and make it in vigorously, using sufficient water to make a thick lather than wash the head well.

Large bottle $1.00, enough for several months, small bottle 50c.

My dear Mr. Okie, editor Kneipp-Blatter.—Your Tormentil soap I consider a very good one. I had excellent success with it, using it for skin-affections and cracked skin. I still recommend your soap very highly.

... some... Kneipp-physician, Karlsruhe

Okie’s Worishofen Tormentil Soap is absolutely neutral that means it is not potted and free of castile alkali. It possesses all qualities of a good and mild toilet soap.

DR. C. V. CHERNITZ, Chemnitz,

Testing station of the Soap Manufacturer’s Union;

Kneipp’s Foenum graecum Soap, used for all impurities of the skin, like exanthemata, grubs, pimples, freckles etc., etc., 20c a piece.

Kneipp’s Hayflower Soap, used for Rheumatism, gout and scrofula. 20c a piece.

Kneipp’s Shavegrass Soap, used with great success for severe affections of the skin, serpigo, dermpatitis grubs, pimples, freckles, liver-spots, etc., etc. This soap can make shavinggrass purified very fine in large proportions which and therefore possesses all qualities of the same.
